LUBBOCK -- Texas Tech University's College of Engineering Murdough Center for Engineering Professionalism will present a symposium on "Engineering Professionalism and Ethics," 4 p.m. Friday (April 7) in the Civil and Agricultural Engineering Building, Room 205.

"The public's safety and welfare depends on the ethics and professionalism of engineers, as well as their technical knowledge. The systems they design may mean the difference between life and death," said Jimmy Smith, Murdough Center director and professor of civil engineering.

The symposium's speakers will include Dave Dorchester, a professional engineer, lecturing on "What Do Ethics Really Mean to the Engineering Profession?"

Dorchester is a member of the Texas State Board of Registration for Professional Engineers and Vice President of the Texas Society of Professional Engineers.

Also lecturing on the "Concepts of Professionalism" is James Schaub, Ph.D. Schaub is a Distinguished Service Professor at the University of Florida. He is the national director of the American Public Works Association and a member of the Accreditation Board for Engineering and Technology (ABET) Engineering Accreditation Commission.

A reception immediately will follow the one-hour symposium at 5 p.m., in Room 209 of the Civil Engineering Department. The symposium is open to the public.

LUBBOCK -- Robly Glover, assistant professor of art at Texas Tech University, will present "Light Magic and Fertility," a Thursday Nights at the Museum program from 6:30-8:30 p.m. on Thursday (April 6) in the Kline Room at the Texas Tech Museum.

Glover will discuss his work from its beginnings and the cultural influences on his art by fertility figures in other cultures. He creates small, free-standing sculpture, lighting and functional hollow ware in metal.

Glover shows his works at The Hand and the Spirit gallery in Scottsdale, Ariz., the Clodagh, Ross and Williams galleries, the NYC in Luminatae and at Keystone at the Crossing in Indianapolis, Ind.

"Thursday Nights at the Museum is an effort to reach out to the non-traditional museum public or those who can't come during the day," said Charles Adams, chairperson of the West Texas Museum Association Thursday Nights at the Museum Committee.

This year, the museum is offering programs that include a focus on contemporary Texas artists in music, applied and fine art.

LUBBOCK -- Adolescent drug abuse, suicide, pregnancy and delinquency will be among the issues addressed during a one-day symposium, "Youth at Risk." The program will be from 8:15 a.m.- 8 p.m. April 22 at the Lubbock Plaza and Convention Center, 3201 South Loop 289.

Frank Walton, a lecturer, consultant and noted Adlerian psychologist, will conduct the seminar. Adlerian psychology focuses on individual responsibility for actions and the striving for adequacy.

A feature of the symposium will be a family counseling demonstration. Walton will work with a consenting family to provide examples of counseling. Family members, who are experiencing the normal stresses of everyday living, will relate the events and problems of their typical day. Walton will evaluate the children's behavior and the motivation for their conduct. For instance, is the behavior a way to get attention or an act of rebellion? Walton then will suggest to the parents ways to react to their children's behavior.

Other sessions will cover: the purposeful nature of behavior and common goals of teenage behavior; the motivation to belong and the influence of feelings of inferiority; and socially interested behavior as a definition of good mental health.

Other topics include: mistaken approaches to parenting; understanding group and family dynamics; effective parenting techniques; and a systematic approach to counseling with teenagers and their family members.

The final session of the symposium will feature a video presentation, "Teenage Suicide: An Approach to Prevention." A discussion will follow the viewing.

The symposium has been approved for seven and one-half hours of credit by the Texas State Board of Examiners of Professional Counselors, one hour of credit for Texas Tech graduate students, 0.9 continuing education units and Texas Association for Alcoholism and Drug Abuse Counselors credit. An application for advanced academic training is pending with the Texas Education Agency.

-more-

YOUTH AT RISK/PAGE 2

The program is sponsored by Texas Tech's Center for School and Community Counseling and the Division of Continuing Education. Co-sponsors are the Northwest Texas Annual Conference of the United Methodist Church and the Southwest Institute for Addictive Diseases.

The symposium is open to the public. Registration for the symposium is \$63 prior to April 10 and \$73 after April 10. Students may register for \$24. Registration fees include the luncheon.

For more information about registration or available credit, contact the Texas Tech Division of Continuing Education, (806) 742-2352.

LUBBOCK -- U.S. Secretary of Education and former Texas Tech University President Lauro Cavazos and Superintendent of Lubbock Independent School District (LISD) E.C. Leslie will be recognized as outstanding educators by the Texas Tech College of Education at its 13th annual Awards and Recognition Dinner at 6:30 p.m. Friday (April 14) in the University Center Ballroom.

Cavazos, who is unable to attend the dinner, will receive the Friend of Education award. Leslie will be named as the college's Distinguished Alumnus. Outstanding graduate and undergraduate students in the college also will be honored.

Texas Tech Interim President Elizabeth G. Haley will speak at the event and Dean Richard E. Ishler will be master of ceremonies.

Cavazos was president and chief executive officer of both Texas Tech University and the Health Sciences Center from 1980-1988. He was named U.S. Secretary of Education in August, 1988, and was reappointed to the post in 1989 by President George Bush.

Leslie received his master's and doctoral degrees from Texas Tech in 1957 and 1970, respectively. He was named superintendent of LISD in 1983 and has spent his entire 33 years of service in public education with the school district. Leslie will retire as superintendent at the end of this school year.

The Awards and Recognition Dinner will have a western theme. Casual and western attire is recommended. Reservations must be made before April 10. The cost is \$10 per person. To make reservations or for further information, contact the Texas Tech College of Education at (806) 742-2385.

LUBBOCK -- Knowledge of a handful of medical tests can make a difference in monitoring one's health.

While dozens of medical laboratory tests are available today, says Dr. Charles A. Bradley of the pathology faculty at the Texas Tech Health Sciences Center, most people need to understand only a half dozen to properly monitor their health.

The tests are the glucose test, complete blood count, urinalysis, cholesterol test, occult blood test and pap smear.

"These tests are standards because they give good insight into how your body is functioning and where potential problems might arise," said Bradley.

As part of National Medical Laboratory Week activities April 9-15, Bradley summarized the tests and their uses.

*Glucose Test -- This is a common medical laboratory test because glucose is the most important carbohydrate in body metabolism.

For testing, a blood sample is drawn after a patient has fasted for eight or more hours. The sample is then analyzed for glucose or blood sugar levels, Bradley said.

Hyperglycemia, or too much blood sugar, is a symptom of diabetes. Hypoglycemia, or insufficient blood sugar, can lead to acute fatigue, restlessness, irritability and weakness.

*Complete Blood Count -- This test provides key information about anemia, infection and other blood conditions.

The blood count procedure determines the number of red and white corpuscles and platelets in a standard size blood sample. Abnormal ratios of white blood cells can indicate infection, appendicitis, leukemia, pregnancy, viral diseases, typhoid fever, infectious hepatitis, rheumatoid arthritis, cirrhosis and other maladies.

Generally for the count, a small amount of blood is taken and then analyzed, either by instrument or microscope.

-more-

MEDICAL TESTS/PAGE 2

"More information can be obtained from a detailed examination of a stained blood smear during a blood test than from any other single laboratory test," Bradley said.

*Urinalysis -- This is another common test -- and probably the most embarrassing -- of the standard procedures. Generally, analysis of the urine supplements and complements other laboratory tests. The color as well as the chemical analysis can provide clues to problems.

Analysis can determine acidity, protein levels, bilirubin, occult blood, specific gravity and other characteristics which may have a bearing on your health. More and more, this is the method of choice for drug testing, Bradley said.

*Cholesterol Test -- This procedure determines the levels of fatty substances, primarily cholesterol, in the blood.

Accumulation of cholesterol leads to deterioration of the arteries and increases the risk of heart disease and stroke.

*Occult Blood Test -- This procedure can identify early signs of colon or rectal cancer. Small samples of three consecutive bowel movements are collected and treated chemically.

Since sources of blood in the stool can be caused by other factors -- such as diet as well as polyps, hemorrhoids or colon inflammation -- this test is the least accurate of the common procedures.

Positive results are re-tested under more controlled circumstances to verify the results.

*Pap Smear -- For women, this test is as important as regular breast examinations. The pap smear analyzes cells from the cervix for signs of cancerous and precancerous growths.

A pap smear should be a part of a woman's regular annual physical and is particularly important for sexually active women.

"While many more tests are available to your physician, these are the basic ones," Bradley said. "Without the tests and the medical laboratory to make the analysis, the health of us all would be at greater risk."

LUBBOCK -- Two School of Nursing students from the Texas Tech Health Sciences Center have been elected officers of the Texas Nursing Students' Association (TNSA).

Sophomore Jay Hopper of Dimmitt was elected TNSA vice president and Lubbock sophomore Darla Walker was voted TNSA secretary for 1989-90. They were recently elected during the TNSA's annual convention in Austin.

Also at the convention, Texas Tech's TNSA chapter was named runner-up in the Chapter of the Year competition. No other chapter in the state conducted more community projects than the Texas Tech chapter, which received commendation for its assistance to the Lubbock community during the measles epidemic earlier this year.

Twelve Texas Tech nursing students and faculty adviser Sharon Decker attended the conference.

The meeting also marked the end of terms for three Texas Tech nursing students who chaired TNSA committees. They were Sue Parrigin of Robinson on the Career Mobility Committee, Paula Vasquez of Lubbock on the Research Committee and Hopper on the Scholarship Committee.

LUBBOCK -- The Texas Tech University Library in April will launch a new fund-raising effort titled "Building Bridges to the Twenty-First Century." The purpose of the yearly campaign is to endow funding for the Library's general fund.

A "tip-off" luncheon for the "Bridges" program will be at noon April 28 in the Croslin Room of the Library. The featured speakers will be Texas Tech Interim President Elizabeth G. Haley and Texas Tech head basketball coach Gerald Myers.

The direct mail campaign will target the class of 1959 and its 30-year counterpart, the graduating class of 1989.

Connie Hines, assistant director of Libraries for development, said the class of 1959 was chosen to spearhead the campaign because it was the last class to give a gift to the Library.

The gift was a \$1,000 endowment designated for library materials. In 1967 the gift was officially named the Jay Teel Dunlap Jr. Endowment Fund for the president of the 1959 class who died in 1966.

"With the funds from the gift already in place, the class of 1959 seemed to be the logical group to build the first bridge," said Hines. "Next year the class of 1960 will work with the graduating class of 1990 to raise funds."

Myers, who is a member of the class of 1959, will chair the campaign this year. Shayne Woodard, 1989 president of the Student Association, will serve as vice chairperson and will be the link with this year's graduating class.

A goal of \$30,000 has been set for this premier year. The long-range goal is \$5 million.

LUBBOCK -- The Texas Tech University Library will host its sixth annual exhibit of books written by faculty and staff members. Books published in the 1988 calendar year will be displayed in the Croslin Room of the Library April 7 through May 12.

The exhibit recognizes Texas Tech authors as part of the Library's observance of National Library Week, April 9-15.

Authors who exhibit books will be honored with a reception from 3:30-5 p.m. Wednesday (April 19) in the Croslin Room of the Library. Donald Haragan, executive vice president and provost of the university, will present certificates of appreciation to all participants. The reception is open to all faculty, staff and students of Texas Tech.

Faculty and staff who want to exhibit their book are asked to leave a copy, on loan, in the University Library Director's office (Room M132) between 8 a.m. and 5 p.m., Monday through Friday, before April 6. A typed biographical sketch on a white, unlined 3- by 5-inch card should accompany the item for display. Information should include at least the author's name, department and academic rank or title. A photograph of the author also should be included.

For more information, contact Connie Hines, assistant director of Libraries for development, at 742-2261.

LUBBOCK -- A 75th anniversary of the national scholastic business honorary Beta Gamma Sigma and the 30th anniversary of its Texas Tech University chapter will be celebrated with a banquet and initiation of new members at 6 p.m. Friday (April 7) in the College of Business Administration rotunda.

The gala, "In Celebration of Excellence," will feature keynote speaker James H. Bearden, Beta Gamma Sigma national president and assistant to the chancellor at East Carolina University in Greenville, N.C.

Texas Tech Interim President Elizabeth G. Haley also will unveil a bronze key display in commemoration of the event.

"The College of Business Administration is delighted with this special event -- one that honors the outstanding achievers in the college and celebrates the anniversaries of these two groups," said Carl H. Stem, dean of the Texas Tech business college.

Guests at the banquet will include representatives from each college and scholastic organizations on campus as well as College of Business Administration faculty and administrators.

Beta Gamma Sigma establishes chapters only at institutions that have business programs accredited by the American Assembly of Collegiate Schools of Business, the national accrediting body. The Texas Tech chapter was founded in 1959.

Students invited to join the honor society must be juniors in the top 5 percent of their class, seniors in the top 10 percent of their class or graduate students in the top 20 percent of their class.

LUBBOCK -- The Texas Tech University Ranching Heritage Association will host its annual orientation and training session for new members of the Ranch Hosts Group from 8:30 a.m. through noon Saturday (April 8) in the Pioneer Room of the Ranching Heritage Center.

Volunteers with the Ranch Hosts Group lead tours of the Ranching Heritage Center and participate in special events such as Ranch Day and the Christmas Candlelight Ceremony.

The training session will begin with a presentation by Wayne Parker of Ralls. Parker is a cousin of the last Comanche chief, Quanah Parker. He will discuss the history of early settlement of the greater Lubbock area and will show his collection of Indian artifacts.

The free session is open to the public. To make reservations or for more information, contact the Ranching Heritage Association at (806) 742-2498.

LUBBOCK -- New York architect and educator Peter Eisenman, FAIA, will present slides of his work during a lecture at 8 p.m. Tuesday (April 11) in the University Center Allen Theater on the Texas Tech University campus.

Eisenman in the summer of 1988 was one of two American architects included in the Museum of Modern Art exhibition, "Deconstructivist Architecture."

The founder and former director of the Institute for Architecture and Urban Studies in New York City, he has designed a wide range of prototypical projects. His designs have included large-scale housing and urban design projects and a series of innovative private houses.

Currently a distinguished professor of architecture at the Cooper Union in New York City and at the University of Illinois in Chicago, Eisenman previously has taught at Cambridge, Princeton, Yale and Harvard universities.

Eisenman's first major building in the United States is the \$43 million Wexner Center for the Visual Arts at Ohio State University, currently under construction. He also has completed designs for large buildings in Pittsburgh, Cincinnati and Rovereto, Italy, and Japan. Some of his buildings include the Carnegie Mellon Research Institute in Pittsburgh, the School of Design, Art, Architecture and Planning at the University of Cincinnati and the new headquarters for the Koizumi Sangyo Corp. in Japan.

He is the recipient of a Guggenheim Fellowship, the Brunner Award of the American Academy of Arts and Letters and a grant from the National Endowment for the Arts. He has won several awards from Progressive Architecture and the American Institute of Architects.

Eisenman is the author of several books, including "House X," "Moving Arrows, Eros and Other Errors" and "Houses of Cards." Another book soon to be published is titled "Terragni: Transformations, Decompositions, Critiques."

Eisenman's lecture is sponsored by the Texas Tech College of Architecture.

(EDITOR'S NOTE: An engineer from your area is included in this release.)

LUBBOCK -- Texas Tech University's College of Engineering will host the 36th annual Southwestern Petroleum Short Course April 17-20.

The annual conference seeks "to provide solutions to current oil producing problems by an exchange of ideas between production experts and industry participants," said Duane A. Crawford, associate professor of petroleum engineering at Texas Tech.

The short course will open with a Lift School presentation April 17-18. The two-day presentation on "The Basics of Sucker Rod Pumping" will be conducted by Robert Gault, a retired associate professor of petroleum engineering at Texas Tech and Steve Gault, a joint venture supervisor with Unocal, a Midland oil company.

Engineers and representatives of more than 30 major oil, service and supply companies will present 41 papers at the two-day school. Two of these papers will be presented by Texas Tech petroleum engineering faculty members: Gabor Takacs, a visiting professor, and Charles Guffey, an associate professor. Harold Winkler, a Texas Tech professor emeritus, will present a third paper.

The additional April 19-20 short course conference, which emphasizes artificial lift discussions, will include technical paper presentations on: drilling and well completion, stimulation and workover, reservoir operations and enhanced oil recovery, artificial lift and production handling.

Also during the short course, J.C. Slonnegar Awards will be presented to Joe P. Byrd, an engineering consultant from Lufkin, and Joe Clegg, an engineer with Shell Oil Co. in Houston. The men were selected by their peers for their contributions to the petroleum engineering profession, Crawford said.

"Byrd is the inventor of one of the most popular pumping units in use today, the Mark II. Clegg is well-known in production technology and is the inventor of the multi-chambered gas anchor, which is used in rod-pumped oil wells," he said.

LUBBOCK -- Joe P. Byrd, a native of Tulsa and an engineering consultant from Lufkin, will receive the J.C. Slonnegar Award from Texas Tech University's College of Engineering April 19 for his outstanding contributions to the engineering profession.

"Byrd is the inventor of one of the most popular oil pumping units in use today, the Mark II," said Duane Crawford, associate professor of petroleum engineering at Texas Tech.

Nearly 25,000 of these machines are in operation around the world, pumping several million barrels of oil daily, said Crawford. The Smithsonian Institute in Washington, D.C., selected the Mark II, a 6.4 metric ton, four-meter tall pump, to be included in its 1976 permanent U.S. Bicentennial exhibit, "Our Changing Land."

Byrd invented the Mark II 33 years ago in Denver, Colo., but the oil industry still considers it a modern piece of machinery, said Crawford.

The Mark II has come to "symbolize the U.S. dependence upon petroleum energy," according to Smithsonian officials.

Byrd has frequently presented papers during Texas Tech's Southwestern Petroleum Short Course.

LUBBOCK -- Joe D. Clegg, an engineer for 36 years with Shell Oil Co. in Houston, will receive the J.C. Slonnegar Award April 19 from Texas Tech University's College of Engineering for his outstanding contributions to the engineering profession.

"Clegg is well-known in production technology and is the inventor of the multi-chambered gas anchor for use in rod-pumped oil wells", said Duane A. Crawford, associate professor of petroleum engineering at Texas Tech.

In the early 1960s, Clegg served as the American Petroleum Institute (API) chairman in West Texas, and helped to make recommendations on pumping wells with gas interference. In 1985, as a Society of Petroleum Engineering (SPE) Distinguished Lecturer, he gave talks on high volume artificial lift. He received the Ralph James Award, from the American Society of Mechanical Engineers in 1986.

In 1988, Clegg was the recipient of the SPE Production Engineering Award for his contributions to petroleum engineering. Currently, he is serving on the API Task Group for gas lift and is the SPE 1989 production engineering program coordinator.

Clegg graduated from Rice University in 1952 with a bachelor of science degree in mechanical engineering.

He has frequently presented papers at Texas Tech's Southwestern Petroleum Short Course.

LUBBOCK -- Service and scholarship honors along with more than \$5,000 in scholarships were awarded Thursday (April 6) at the annual Texas Tech School of Law Awards and Honors Day.

Among top honors, the George W. and Sarah Dupree Award for the third year student who best exemplifies the legal profession was presented to Tommy LaFon of Kermit. The award is determined through popular vote of all third year students.

Thomas Baker was named the Outstanding Professor of the year through a poll of all Texas Tech law students. Faculty member Charles Bubany received the Ethics in Teaching Award from the student body.

Student Bar Association President John Sigman of Marshall was recognized as the outstanding member of the Student Bar Association.

Also honored was the interschool client counseling team that won the five-state regional meet in March and won one of three rounds in national competition on March 30 in Baltimore, Ma.

Students selected to the national Order of Barristers for high honors through courtroom advocacy were: Rick Fletcher of Goodland, Kan.; Ken Good of Gorman; Gary Harger of Lubbock; Tommy LaFon of Kermit; Ronnie Baugh of Lubbock and Tonda Curry of Plano.

HEALTH TIPSHEET
from
TEXAS TECH HEALTH SCIENCES CENTER
April 7, 1989

TEAM PLAYER -- The TTHSC patient care team has added a new member -- the librarian. A national trend increasingly involves clinical librarians accompanying physicians on hospital rounds. Worth noting during National Libraries Week April 9-15 is this example of how librarians are helping other professions deal with the information explosion. Clinical Medical Librarian Margaret Vugrin, M.S., makes rounds weekly with physicians in oncology, pediatrics and orthopedics. From the information she gathers from doctors and patients, she conducts searches for publications and medical articles which may help the doctor in evaluating and treating a particular problem. This process saves time for the physician and keeps the librarian familiar with doctors' needs and nomenclature. The joint rounds benefit the doctor, the librarian and, most importantly, the patient. For more on the role medical clinical librarians can play in providing health care, contact Vugrin at (806) 743-2206.

THE LONGEST BATTLE -- Finding the incentive to fight the battle of the bulge is often difficult for people who are moderately overweight. Though their immediate health is not endangered, over the long term the pounds add up to potential problems. These are the people a new TTHSC weight management program aims to help. TRIM patient education coordinator Kae Hentges, Ed.S., said program participants fast, using a liquid diet of 800 calories daily until they reach their weight loss goal. Fasting is the quickest way for participants to lose weight and build confidence. The second phase of the program is a 12-week education segment which teaches them about food and good nutritional habits, in effect re-teaching them how to eat. The educational segment of the program is as important as the actual weight loss because it helps participants learn how to keep the weight off after the fasting ends. To discuss TRIM or to follow a patient through the program which starts Wednesday, contact Hentges at (806) 743-2770.

For assistance in covering these or other stories, contact HSC News Bureau manager Preston Lewis at (806) 743-2143.

LUBBOCK -- The Executive Communications' teleconference "The Organized Executive" will be broadcast via satellite to the Texas Tech University Health Sciences Center 2-4 p.m. Wednesday (April 12) in Room 5A100.

Organization expert Stephanie Winston will present the program. Winston is the author of "Getting Organized" and "The Organized Executive" and has appeared on "Today" and "Good Morning America."

The conference will demonstrate methods for controlling paperwork, managing time and working more effectively with others. Registration is \$25 for the public.

Conference host is the Library of the Health Sciences Teaching and Learning Center, which can be reached at 743-2213 for details.

LUBBOCK -- Hans Christoph Buch, a West German free-lance writer, critic and essayist, will offer a lecture on "Who Was Adolf Hitler?" Buch will discuss "Hitler's personal life and psychology rather than the social and political forces that brought him to power." The lecture will be at 8:00 p.m. Monday (April 17) in Room 57 Business Administration Building at Texas Tech University.

Buch was born in Wetzlar, Germany, and attended schools in Wiesbaden, Bonn, West Berlin and Marseilles, France. He has served as a visiting professor at several American universities, including the University of Texas at Austin, where he currently is teaching German literature. Buch now resides in West Berlin with his family.

Buch will be the guest of Delta Phi Alpha, the national honorary fraternity for students of German, and the Southwest Center for German Studies.

There is no admission charge and the public is welcome. For more information, contact the department of Germanic and Slavic Languages, Texas Tech University, (806) 742-3282.
