# COLLEGE OF ARTS AND SCIENCES LONG-RANGE PLANS

# DEPARTMENT OF ANTHROPOLOGY (ALSO SEE DEPARTMENT OF SOCIOLOGY)

## Historical Resume

Anthropology, at most second or third rate schools, is conjoined in a minority position with some other discipline. The other half of the joint department is frequently sociology but the disciplines of geography, geology, history, political science and zoology are, or have been, relatively frequent combinations. There can, of course, be no question of the logic involved in combining anthropology with any of a rather wide plethora of other disiplines -- it does result in lower administrative costs. Another reason for conjoinment is due to the fact that anthropology is one of the most recent additions to the academic curricula of a large number of schools. The approach of many of these institutions is to have it start small and wait to see what happens. This conceptual framework is analogous to wishing for a large field of maize but planting only two kernels. Given an adequate amount of time, the desired ends, in both cases, will obtain. Regardless of how or why it happened, one significant result of the conjoining-minority factor is that no anthropological segment of a department has risen to a position of academic eminence while it was part of a "something-anthropology" department.

Bearing this in mind, the historical summary of the origin and role of anthropology at Texas Technological College can be presented in most abbreviated fashion. Anthropology began with the arrival of Dr. W. Curry Holden, who joined the department of History (or in terms of course offerings, the Department of History, Sociology, Philosophy and Anthropology) in 1929. Dr. Holden's doctorate was in history, but a funny thing happened to him on the way to Tech. He became involved in an archaeological excavation and through this experience developed a keen and lasting interest in the subject.

This particular excavation was fated to affect the course of anthropology at the college for many years to come. It seems that the local press devoted a great deal of space to coverage of this "dig" and in this fashion stimulated a great deal of interest in anthropology among the students and staff of this institution. That must have been the case, for when Dr. Holden arrived in Lubbock, he was rather amazed to discover that his teaching schedule included a course in introductory anthropology. Undaunted by the fact that he had never had a course in the subject, he began reading avidly and managed to keep ahead of that first class in anthropology at Texas Technological College in the year 1929. Dr. Holden continued his library research and for a good many years was the anthropologist at this school. Part of his summers were spent conducting archaeological research and training students in the theory and methods of archaeology. His archaeological work was a major contribution to our knowledge of the prehistorical cultural development in the region.

Anthropology continued to be taught by Dr. Holden and other historians until his retirement in 1964. Even after his retirement, he continued his endeavours in this field by teaching the extension course in cultural anthropology for a number of years. The renowned anthropologist A. L. Kroeber, once wrote, "If anthropology is not history, it is nothing." The viewpoint of historians here seems to have been, "If an area of interest exists which is not history, it must be anthropology." At least it appears that the anthropological curriculum developed in this fashion. There were also, at various times since 1956, staff members of the history department who were trained anthropologists, but those we know, or know of, did not seem to remain here for any protracted period of time.

For a listing of staff, publications, etc., for the period from 19291964, the reader is referred to the report presented by the History Department.
Here too, will be found figures relevant to student enrollment, degrees awarded, and so forth. Unfortunately, the statistical analysis is not subdivided according to the various fields of history, sociology, philosophy and anthropology, which were present in the department at various times.
Moreover, these data are not readily available and as a consequence, have not been included in this report.

In 1964, the football of anthropology was passed from the Department of History to that of Sociology (to this day considerable controversy rages as to thether this was a forward pass or lateral). In any event, Evelyn Montgomery and Richard Keslin became the anthropological segment of the joint department in 1964. Their first step was to revise the curriculum to one which was attuned to the needs of an undergraduate anthropology major (within the limitations of a two-man staff, but with the expectation of two additions). Highly specialized and/or esoteric courses were replaced by offerings more congruent with anthropological method, theory and objectives. Courses offering broader cross-cultural analysis replaced those dealing with single discrete political units and those concerned with geographically limited subcultural regions. The eight courses listed in the 1964 catalog were replaced by eighteen. The anthropologists were advised by the dean and department head that the growth of anthropology at this institution would be achieved only by an increase in the number of anthropology majors, and the way this was to be accomplished was by concentrating on the teaching of anthropology. The staff present at that time did concentrate on effective . teaching, but at the expense of their personal research and publication interests. They were assisted in their endeavours by Richard Furlow from

1965 to 1967, and by Kenneth Honea, who replaced Mr. Furlow in 1967.

A partial indication of the success of these efforts is a considerable increase in the number of anthropology majors since the fall of 1964.

Time	Number of Majors	Degrees Awarded
Fall, 1964	3	
Spring, 1964-65	8	<b>1</b>
Spring. 1965-66	12	2
Spring, 1966-67	17	4
Spring, 1967-68	24	4

As the figures indicate, the number of majors has increased 700 per cent over a four year period. However, because we are working with such small numbers, statistical manipulation to assess future growth would be totally futile. Even the figures for class enrollments are not particularly applicable to this purpose, as can be seen by perusal of the tabular data for the period 1964 to 1968.

Registration Figures for Anthropology Courses	Registration	Figures	for	Anthropology	Courses
---	--------------	---------	-----	--------------	---------

Time		No. of Sect	ions	Average No. per Section

Spring 231 209 232 321 adv. 75 605	35% 53% 12%	2 4 3		104 80 25

<sup>\*</sup> Registration figures for Sociology 336, taught be Dr. Montgomery, Anthropology 4321 and summer courses have not been included in these figures.

From these data, two broad generalizations can be extracted. First, the number of students in the introductory courses appears to be directly proportional to the number of sections offered in any given semester. The figures for advances courses show an increase in enrollment over the years and at the present time also seem to be proportional to the number of courses offered. However, one would be justified in anticipating minor fluctions over a period of the next year or so.

For a tabulation of the departmental budget, salaries, M.E. and T., etc., the reader can turn to the history department report for the period ca. 1959-1964, and the Sociology report for the period from 1964 to the present.

## Current Status of Anthropology

The present anthropological staff includes three associate professors (listed in alphabetical order): Kenneth Honea, Richard Keslin, and Evelyn Montgomery. Edwin Kozlowski, a linguist, will join the department in September 1968, as an Instructor. (Consult the sociology report for information on faculty compensation).

Available space includes three offices and partial use of 307 Ad. The room is shared by our sociological colleagues, graduate students, undergraduate majors with research problems, teaching assistants, and students taking make-up exams.

The following research activities of the staff have been abstracted from the 1967 graduate faculty data form.

### Dr. Honea

# General Research and Creative Activity Background

- 1. Invention and exploitation of process to reproduce casts of archaeological materials in low-cost industrial polyester plastics.
- 2. Experiments in the intentional and natural fracture of stone, resulting in establishment of empirical criteria by which humanly fractured stone can be distinguished from naturally fractured stone.
- 3. Field and laboratory research into the nature and origin of Paleo-Indian and Proto-Archaic cultures in the Southwest.
- 4. Extensive studies of the morphology and development of Pueble III Black-on-white and Pueblo IV glaze in northcentral New Mexico.
- 5. The origins of intrusive Puebloan and Mogollon pottery in archaelogical sites of West Texas.

- 6. Distributional studies in materials and flaking technologies in prehistoric West Texas.
- 7. Nature and origin of Non-Puebloan Ceramics in West Texas.
- 8. Evolution in the stone technology of archaeological sites of the South Plains.
- 9. Survey and interpretation of archaeological sites of the South Plains.
- 10. Excavation and interpretation of a prehistoric multi-component kill site in Lamb County.
- 11. The San Marcos Comples in Central Texas---a possible Pre-Clovis culture of the late Pleistocene.
- 12. The Gila Hot Springs site, a San Pedro stage site of the Cochise culture in Southwest New Mexico.
- 13. The Morphology of flaked and ground stone tools at the sites of Pueblo Largo and Las Madres, New Mexico.
- 14. A late Archaic site near Folsom, New Mexico.

## Dr. Keslin

Archaelogical field research on the Paleo-Indian, Archaic, and Middle Woodland occupation of the Upper Great Lakes area (including excavation of the Holcombe, Hodge, and Green Point sites).

The applicability of Cinematographic time-lapse studies to archaeological research (sponsored by Departmental Research Projects, University of Michigan Graduate School, grant No. 62 and 1290); this led to the invention of an ultralight transistorized timer designed to trip the shutter of a motion picture camera at any rate between 1 and 60 frames per minute.

Research on the applicability of geophysical electronic equipment to archaeological escarch (sponsored by Departmental Research Projects, University of Michigan Graduate Ichool, grant No. 599) restivity measuring devices were tested on a variety of archaeological sites providing a considerable amount of information on sub-surface features, transistorized differential proton magnometer was constructed, but there was inadquate time for testing.

lesearch on correlations of prehistoric culture-complexes and post-pleistocene ecoloies in the upper Great Lakes, Associate Director (with J.B. Griffin), (sponsored by S.F. G-15710 and N.S.F. GE 1311).

rchaeological Research on the Role of Salt as an Element of Cultural Diffusion (sponsored y Wenner-Gren Foundation for Anthropological Research).

#### r. Montgomery

ommunity studies of five Peruvian villages, with special emphasis on social group nown as ayllu-1962.

ollection of Peruvian folklore with emphasis on its relationship to group and interersonal relationships---summer, 1960.

## Montgomery, cont.

An anthropological approach to curriculum building----in progress.

A study of the Shiriana Indians of the Amazon jungle with special emphasis on acculturation and on the types and incidences of mental illness---1966.

At the present time, one extension correspondence course in Cultural Anthropology is being offered.

The Texas Technological College Archaeological Survey was begun in 1967. This is a year round research program designed to locate and record significant prehistoric sites in West Texas. This is a necessary first step to selection of key sites for excavation which will resolve some of the lacunae in knowledge for the prehistory of the region. Students participate in this program on a voluntary basis. They are expected to participate in regular (biweekly) field surveys, the recording of archaeological data, and the cataloging and analysis of archaeological materials. They receive the kind of experience which cannot possible be obtained from any text. Another aspect of the survey is a bulletin (published irregularly) to disseminate information of the site survey and the results of excavations. Untimately, it is hoped that the bulletins will be made available for purchase by the general public.

## Objectives and Goals of Anthropology

In terms of the broad intellectual spectrum of anthropology, the initial goals established in 1964 have not yet been attained. The major objective, then and now, is to have a <u>balanced</u> anthropological program which will allow students receiving a B.A. here to attend any graduate school in the country without being "educationally disadvantaged." This is not to say that the situation has not improved over the years. It has, and we firmly believe that the rate of progress can and should be accelerated in the immediate future:

What then, are our shortcomings? Foremost among them, are weaknesses in certain areas of the extremely broad field of anthropology. Some of the weaknesses are more crucial than others, but these are not always the problem areas that are easily re-

solved. For example, the fields of specialization within anthropology are physical anthropology, cultural anthropology, archaeology and linguistics. Each of these in turn has a large number of subfields, e.g., a physical anthropologist might specialize in genetics, paleoanthropology (study of fossil primates and their significance over the long period of human evolution), primate studies, population analysis, medical anthropology, variations of sex and age, variation due to ecological conditions, osteology, serology, and growth patterns, to mention only a few for one major field. Similar lists could be presented for each of the others, but were omitted for the sake of brevity in this report.

It might be noted that there is at least one course covering each specialization of physical anthropology at major universities. At Texas Technological College, there is but a single course. To offer more courses at this time would be at the expense of coverage in other areas. Moreover, the courses should be offered by a specialist in the subject, of which there are none on the staff. One reason for this surprising omission is due to the fact that the present demand for physical anthropologists far exceeds the supply, which means that specialists in this field are more expensive at all academic levels than most of their colleagues. A good many administrations seem to have great difficulty in justifying differential compensation scales for personnel at the same level of academic training and experience. However, if we are to add a good physical anthropologist, it must be at a higher salary scale than that of most new appointments.

When this staff addition is made, the present course on physical anthropology should be replaced by four new courses: Human Evolution; Human Populations; Comparative Anatomy (including osteology); Human Genetics and Serology. This change should be made as soon as possible, but certainly within a two-year period.

New courses are also necessary in the area of Linguistics. The one course we now have should be eliminated and replaced by two new ones: Language and Culture and:

Languages of the World.

In the area of Cultural Anthropology only three additional courses are necessary to accomplish an ideal undergraduate curriculum; these are: Peoples of Asia; Folk Society; History and Theory of Anthropology. (The latter course would be unnecessary if senior undergraduate majors could participate in a graduate seminar on this topic).

The staff required for this curriculum would consist of a total of six. Steps in this direction can, of course, be taken with one more addition to make a total of five staff members.

To stimulate student interest in the field (and also make the material more readily comprehensible), there are a number of ways in which the teaching methods currently utilized can be markedly improved. At the introductory and advanced levels, there are numerous outstanding films which illustrate anthropological concepts far more vividly than is possible, even by the greatest lecturer in the world (title to which is modestly disclaimed by all). For example, a lecture on the topic of primitive art, without examples of the art form, and without illustrative slides or films is an almost impossible endeavour. Yet, it must be done each semester in cultural anthropology. There are numerous slides and films available on this topic as well as a great number of other topics ranging from archaelogical methodology to zoological primate research.

To make use of the currently available visual and audio teaching aids in anthropology, the prerequisites are, in theory at least, quite simple:

- a room capable of being totally darked (hopefully with a minimal number of heat exhaustion cases among those confined)
- a film projector (or access to one)
- 3. a budgetary allocation to allow the purchase and/or rental of suitable suitable materials (films used in the introductory course, which are taught each semester, would be less expensive in the long run to purchase than rent.
  Other needs, for both teaching and research, are laboratory and storage facilities.

At least three laboratories are needed, ideally each would have approximately 400 square feet of space. One would be used for osteology, one for comparative primate anatomy and serology, and one for archaeological research (processing, cataloging, and analysis of archaeological materials, map preparation, artifact drawings, photography, etc.). Each laboratory would be expected to have adequate storage facilities and the basic equipment necessary to its functions. The need for an archaeological laboratory is extremely acute at the present time, not only for the processing and analysis of archaeological materials which were excavated in Lamb County this summer, but also for effective utilization of such equipment presently available (although it is the personal property of Dr. Honea). This equipment includes a Mettler electric laboratory balance, thermostatically controlled ceramic kiln, survey and analysis instruments.

The summer of 1968 witnessed the reinitiation of archaeological field research and student training. This area of endeavour should be continued and if it is at all possible, expanded. A reasonable amount of equipment and funds are desparately needed to continue this training and research. For purposes of site survey, a four-wheel drive vehicle would greatly extend the terrain covered. It would also make relatively remote areas accessible to archaeological field crews. Although for transportation of personnel and equipment to and from the sites being excavated, a vehicle of the carry-all type would be ideal. For mapping and teaching students how to prepare maps, the department should have an engineering transit (or theodolite) and accoutrements, a telescopic alidade and accessories. Cameras are necessary for recording purposes and students must be trained to use them properly. If there are vehicles, it follows that a budget to use and maintain them is necessary. If there are no vehicles, there should still be a budget item to cover the expense of utilizing personal vehicles for site survey work, site excavations and field trips.

Within the next few years, possibly as early as 1969-70, an M.A. program in anthropology should begin. If the program is to succeed, we would very likely need between thirty and forty undergraduate anthropology majors. Although it should be noted that most of the good graduate schools in anthropology have a much higher percentage of graduate

students than undergraduate majors. We would also need a staff of at least five, all of whom would have the Ph.D.. Seven would be a closer approximation of the ideal situation, but it is feasible to begin the program with the smaller number indicated. This is the level at which anthropology should become a separate department.

The pattern used for the N.A. program might logically emulate that which was initiated at the University of Michigan five years ago. The philosophy of their program is to have the N.A. candidate complete his course work in a one-year period, take his exams and then move on toward the Ph.D.. To this end, a seried of core courses in the major fields of anthropology have been developed. The objective is to have the student learn all sub-fields of anthropology have been developed. The objective is to have the student learn all sub-fields of anthropology at the Master's level, so when he finishes he may concentrate on his field of specialization in pursuit of the Ph.D.. While working on the N.A., his course program is supplemented by areal or topical courses not taken as an undergraduate.

Graduate courses\_could be offered as early as 1969-70. If this is done, anthropology would move to an M.A. program as sociology moves to offer the Ph.D. in that field. Courses which could be offered include the present one for Individual Studies (Anthro. 531) and a series of seminars. One should be a Seminar in Mistory and Theory of Anthropology (this could be repeated as the topic varies). There could also be a seminar in Ethnology (which could be repeated as the topic varies, e.g. areal topics: Latin America, Oceania, North America, Africa, North Africa and the Near East, Eastern Asia, etc., conceptual topics: Personality and Culture, Social Organization, Folk Society, Primitive Technologies, etc.). Seminar in Prehistory (again may be repeated as topic varies, topics could include: Methodology, North America, Europe, Africa, Latin America, etc.) There would also be a seminar in Physical anthropology (repeatable topics: Fossil Primates, Living Primates, Populations, etc.). There is one graduate Seminar already on the books, Origins of Social Customs and Institutions.

### SUMMARY

Over the greater period of its existence at Texas Technological College, Anthropology has been an academic orphan. One can attribute the factors primarily responsible for this (with or without tongue in cheek) as historical. In the 35 year period between 1929 and 1964 there were a total of four professionally trained anthropologists on the staff, all of whom were here between 1956 and 1964. At no time were there more than two simultaneously present.

A new era began in 1964, when anthropology was removed from history and conjoined to sociology. At that time the curriculum was expanded and the recent period of growth began. With a four man staff, as of September, 1968, we plan to add three new courses: Introductory Linguistics, Language and Culture, and Peoples of Asia. This will bring the number of courses to twenty-one for either the spring semester of 1968-69 or fall, 1969-70.

Present and future needs and goals of anthropology are as follows:

- 1. A fifth member of the department to allow expansion of course offerings in Physical Anthropology (estimated cost: \$9,000-17,000).
- 2. Improved teaching techniques through use of audio-visual aids (estimated cost: having a lecture hall made light-proof, \$400: cost of 16mm. projector \$450: cost of films and laides purchased the first year, \$2,000: cost of film rentals in subsequent years, \$600).
- 3. Laboratory and storage facitlites (estimated cost: osteology laboratory steel storage cabinets \$500; osteometric equipment \$1,200; comparative anatomy and serology lab: binocular microscopes, centrifuge, refrigerator, cabinets and miscellaneous equipment, \$4,000; laboratory of archaeology: microscopes, calipers, cameras, drafting tables and misc. equipment, \$3,000).
- 4. Expansion in the area of archaeological research and training (estimated cost; purchase of vehicles, \$6,000; purchase of mapping equipment and basic field supplies, \$1,700; annual budget for travel and expendable supplies,

- \$1,400. If personal vehicles are used, there should be \$800 per year for travel.
  - 5. Initiation of M.A. program in anthropology (estimated cost: nothing, if the other four points are achieved first; if they are not, we would need an absolutely minimum staff of five and at least two functioning laboratories).

With the improvements indicated, anthropology at Texas Tech would be academically equal to most schools of comparable student enrollment. Without administrative support, anthropology is likely to continue as it had for most of its existence here—as a "tag-a-long" or "me, too", discipline with a rapid turn-over of personnel who might chaff at the confining limitations of having to work without that which is considered basic equipment at the majority of colleges and universities.

# PART I

# HISTORICAL INFORMATION

## Historical Summary

The Department of Art was formed in September of 1967. Prior to that time the art programs were in two different departments; one program was in the Department of Architecture and Allied Arts under the School of Engineering and the other was in the Department of Applied Arts under the School of Home Economics. Certain historical figures are provided in this section for the Applied Arts Department only because there was no clear cut way to separate the architecture and allied arts information. It should also be noted that the enrollment figures do not tell a completely accurate story because several architecture courses were major courses for the art student and some of the Allied Arts courses were required for architecture majors.

When Texas Technological College opened in October, 1925, there was considerable student interest in art. Courses in watercolor, charcoal, and life drawing were offered during the first year of operation. In 1928 the School of Home Economics created the Department of Applied Arts to offer courses in Design, watercolor and oil painting, interior decoration, and general art history.

By the fifth year of Texas Tech's history, a fairly strong program of aesthetic instruction in a variety of fields had been established, and the first degree program in art was introduced through the Applied Arts Department. An architecture curriculum was added to the Architectural Engineering Department in 1933, and in 1934 the department was renamed Architecture and Allied Arts and was authorized to offer a curriculum in commercial art, which later became advertising art and design. Before the close of its first decade, Texas Tech was offering as much instruction in art as the average school in the country its size. The degree programs and complementary activities continued to flourish.

Available information regarding the Allied Arts program and the Department of Applied Arts has been included in the attachments.

The following attachments include:

- Number of Graduates 1937-1968
   (B.S. in Home Economics, B.S. in Education, B.A., B. Ad. Art)
- Listing of Full Time Faculty with the Rank of Assistant Professor or Above - 1926-1968
- Listing of Publications and Art Work of Faculty: Former Applied Arts Faculty

(Listing of current faculty publications and art work is included in Section 2)

- 4. Applied Arts' Enrollment for the Past Ten Years
- 5. Department of Art Enrollment, 1967-1968
- 6. Credit Hours for Fall Semesters 1956-1967, Allied Arts Courses
- 7. Credit Hours for Fall Semesters 1956-1967, Applied Arts Courses
- Summary Tabulation of Budgets for the Department of Applied Arts, 1957-58 - 1966-67
- 9. Tabulation of Budget for Department of Art, 1967-68

Because the Department of Art was formed in September of 1967, the historical summary of the origin and development of the department is included in the section on the current departmental status.

## PART II

CURRENT INFORMATION

## A General Statement

The Department of Art holds the philosophy that every individual has creative potentialities which can be developed under proper guidance in a conducive evnironment. Many of the courses offered are designed to meet the specific needs of the various major programs available in the department. Today's fast changing, scientifically oriented society demands highly specialized people in the arts, and one of the objectives of the department is the basic concept of the professional approach. The instruction is designed to prepare the student to be a producing artist or designer in the various highly competitive fields available to him upon the completion of his training.

The department is aware of the fact that through a pursuit of personal excellence in the arts, the individuality of the student is cultivated. Courses have been developed to appeal to students from all areas of the college who wish to engage in creative art experiences as a part of their liberal education.

The department will constantly strive to strengthen the various professional and general courses within the departmental program. In doing this, the needs of students are of the utmost concern in the development and modification of course and program offerings.

The Department of Art has three major purposes: to provide (1) degree programs that lead to professional development in the visual arts, (2) a general nonprofessional degree program for the liberal arts students, and (3) general service courses.

## New Department

The current year (1967-68) has been a very hectic and exciting year for the Department of Art. Much time and energy were required of the faculty, far beyond the call of duty, to get the department on a solid base in a very short time.

The final decision on the structure and disposition of the Department of Art was given to the faculty late in May of 1967, and approved by the Texas Technological College Board of Directors on June 3, 1967. It was difficult to involve the faculty in planning for the new department during the summer of 1967 for two reasons - one reason being that many of the faculty were away from campus. The second reason was because contracts were issued late in the summer, and there was doubt among many of the faculty as to their fate. The development of the budget during the spring of 1967 presented a real problem. Budget requests for Applied Arts and Architecture and Allied Arts had been prepared in the Schools of Home Economics and Engineering. When it was announced that the Department of Art would be in the School of Arts and Science, it had not been determined who should plan the budget. Later, the Executive Vice President called the designated chairman of the Department of Art in to prepare a budget for the department. Effort was made to pull faculty salaries in line (salaries varied greatly between the two separate faculties). The designated chairman of the Department of Art had spent time with the chairman of the Department of Architecture in getting evaluations of the former Allied Arts faculty. Later the Dean of the School of Home Economics was called in to cut the salary recommendations for the former Applied Arts faculty members; changes were also made in the salary recommendations for the former Allied Arts faculty members. The chairman of the Department of Art was unaware of these later changes until the contracts were issued.

## Enrollment

The department is somewhat unique in that in its first year, according to available figures, it was second only to one school in the Southwest (Texas, Louisiana, Arkansas, Oklahoma, New Mexico, Colorado, and Arizona) regarding the number of majors (North Texas State University reported 576 art majors while Texas Tech reported 570 art majors in the fall of 1967). In the fall of 1967, the Department of Art was probably offering more semester hours credit in art

than any other school in the state. The department offered 6524 semester hours in the fall of 1967 and 7106 semester hours in the spring of 1968 (nine per cent increase).

In addition to courses for art majors, the department offers a large number of service courses (approximately 40 per cent of the art courses). The largest portion of service courses are for elementary education, home economics, and arts and sciences students. A listing of the enrollment figures for 1967-68 follows this section of the report.

## New Curricula

The art faculty began a crash program for the development of new art courses and degree requests. They spent many long hours in committee work. Some nights they would work until the early morning hours and then go home, shower, and come back to school. The committee of the School of Arts and Sciences approved the new courses and the request for the Bachelor of Fine Arts degree and the Master of Fine Arts degree.

After some problems, the new courses were approved to be listed in the 1968-69 catalogue. No mention of the proposed degrees could be made in the catalogue.

#### Excellence of Programs

The former art programs had obtained high degrees of excellence and recognition in advertising art, art education and interior design. Effort was made to further strengthen these areas and also gain excellence and depth in the areas of studio and art history. For the first time, a studio program was developed with depth in drawing, painting, printmaking, sculpture, pottery, jewelry, enameling, and textile design. The studio areas will be able to move at a rapid pace because the department has key faculty members who can provide the needed leadership.

## Faculty

September, 1967 started with 31.6 faculty positions in the Department of Art. The faculty was officed in the Home Economics Building, the Architecture-Computer Building, and in barracks on the southwest corner of the campus. The faculty members were teaching applied arts courses, allied arts courses and architecture courses (some of the faculty in the Department of Architecture were teaching Allied Arts courses).

The two former Allied and Applied Arts faculties welded together into one in very short order - especially amazing when they were still teaching all over campus and officing in scattered areas. Because so much had to be done at once, the faculty's personal production was greatly reduced.

The overall quality of the department's faculty is very high. In fact, this faculty has credentials that are more impressive than the faculties of departments offering doctoral work. The department has been fortunate in recruiting and holding an exceptional faculty; however, this will become more difficult if proposed undergraduate and graduate programs, adequate facilities, competitive salaries, and a realistic operating budget are not made available.

Faculty members serve in national and regional organizations, schools, foundations, and government agencies in the following capacities: officers, committee chairmen, speakers, consultants, editorial board member of professional journals, state representatives to national groups, and jurors. On the state level, faculty members serve in professional organizations as officers, committee chairmen, jurors, speakers, editors of professional journals; serve as consultants to state agencies and schools. Faculty members are represented in national and state art exhibitions.

Faculty ranks and compensation, publications and art works, degrees, and brief data sheets follow this section of the report. Complete faculty data sheets are on file in the office of the Department of Art.

-42--

## Departmental Administrative Structure

A departmental administrative structure was developed with the approval of the Dean of the School of Arts and Sciences. Below is a chart of the administrative structure.

	Chairman		
Assistant to Chairman		Co-ordinator of Graduate P	
Co-ordinator of Advertising Art and Two-dimensional	Co-ordinator of Three-dimensional Studio and	Co-ordinator of Interior Design	Co-ordinator of Art Education
Studio	Art History and Appreciation	•	· · · · · · · · · · · · · · · · · · ·

In the near future, with successful recruitment in art history and advertising art, changes will be made and advertising art will be separated from two-dimensional studio; art history and appreciation will be separated from three-dimensional studio. At that time, a study will be made regarding the possible combination of the two-dimensional and three-dimensional studio under one co-ordinator.

#### Degrees Offered by the Department of Art

Degrees offered by the Department of Art include:

- Bachelor of Art degree with a major in art.
  - This is a non-professional liberal arts degree. By 1973 it is planned to introduce a major in art history under this degree.
- Bachelor of Science degree in Education with art certification.
   The all-level and broadfield secondary certifications are available under this degree.
- 3. Bachelor of Advertising Art and Design.

This degree was transferred intact from the School of Engineering to the School of Arts and Sciences. This degree will be phased out as soon as the Bachelor of Fine Arts degree is approved. Mos

-43-

of the freshmen who enter under this degree program will change to the Bachelor of Fine Arts degree if it is approved in the fall of 1968.

 Bachelor of Science degree in Home Economics with a major in Applied Arts.

This degree was not transferred to Arts and Sciences and will be phased out. Over the strenous objections of the Department of Art faculty, a non-professional applied arts major in Home Economics appears in the 1968-69 catalogue. When reading part of this catalogue, it appears that this degree is for an interior design major. There has never been such a major although interior design was one of several professional options available under the old applied arts major. The art faculty has recommended that if the School of Home Economics is to offer a nonprofessional option in an art related area, it should be jointly planned by the art faculty and the home economics faculty and should be designated as a home arts or related arts major. If the program in the School of Home Economics is really necessary, a designation other than applied arts is needed to eliminate confusion between this program and the programs in art and/or the former Applied Arts major.

Students who were in the Applied Arts program in 1967-68 have seven years from the time they entered Tech as freshmen to complete their degrees under that program.

## Degrees Granted

In 1967-68 the following degrees were awarded:

Bachelor of Advertising Art and Design 22

Bachelor of Arts - Art Major 22

Bachelor of Science in Education Art Certification 18

Bachelor of Science in Home Economics -Applied Arts Major 17 Total Degrees Granted

## Proposed Degrees to be offered by the Department of Art

The following degrees were developed this year to become effective in the fall of 1968:

> 1. Bachelor of Fine Arts degree with four major areas of specialization.

79

Major areas of specialization are Advertising Art, Art Education, Interior Design and Studio. The studio major has specialization in drawing, painting, printmaking, sculpture, pottery or jewelry.

Master of Fine Arts degree 2.

General major in art with emphasis on the studio area.

## Budget

The department faced a major problem involving the budget for maintenance equipment, and travel. It seemed we always had too little to do the necessary job.

A breakdown of the budget for 1967-68 follows:

Teaching Salaries	\$ 305,305.00
Staff Two part-time technicians \$ 5,220.00 . One Secretary 3,720.00 One part-time Clerk-Typist 1,590.00	10,530.00
Student Assistants	2,500.00
Travel	1,000.00
Maintenance and Operation	6,000.00
Capital Outlay	7,000.00
Total Budget	\$ 332,335.00

-46-

The department felt that the budget was inadequate in the following areas:

Teaching Salaries: Major problem in this area is adequate salaries to hold key personnel.

Staff: More staff positions are needed to help the faculty be more effective in the classroom

and in their production.

Student Assistants: Because model fees for classes must be paid out of this item, the sum allotted is inadequate.

Maintenance and Operation:

With increased enrollment, equipment demands
more upkeep and repair, and more miscellaneous
supplies are needed to handle the teaching needs.

## Space

The laboratory space assigned to the department has extremely heavy use. Many labs are in use from 7:30 a.m. until 9:30 p.m. without a break. While this is adequate for some basic design and drawing classes, it is very undesirable in special areas, because the labs need to be open for student use at times other than class periods. In sculpture, jewelry, pottery, and crafts, it is impossible to carry one's home work to the dormitory. The same holds true for painting and certain areas in interior design.

Another undesirable feature of the space assigned to the department is the necessity of scheduling three or more different types of classes in one laboratory. The inadequate labs are detrimental to the quality of teaching.

In the fall of 1967, the department had 113 classes meeting 549 contact hours in 22 rooms (seven of the rooms were shared with other departments). In the fall of 1968, there are 121 classes scheduled for 762 contact hours in 24 rooms (eight of these rooms are shared with other departments). Neither of these figures include arranged classes. A listing of the use of space available to the department for classes follows this section of the report. Thirty-two rooms

were provided for office space for the 38 faculty members and teaching assistants.

With the beginning of the new art courses in the fall of 1968, many classes will change from five hours a week (one hour lecture and four hours lab) to nine hours a week (nine hours lab). This change will make crowded space conditions even more crowded. The increase in lab hours is one of the first steps in meeting the accreditation standards set by the National Association of Schools of Art.

In the fall of 1967, many of the labs were in use 40 to 48 hours a week. In the fall of 1968, some labs will be in use over 50 hours per week. Proposed Building

The Department of Art entered the proposed building project for the Architecture and Art Complex in the middle of the planning. Money had been allocated for an Architecture Building which would also house Allied Arts (before the Department of Art was formed). After the formation of the department, it was decided that part of the project money would be used to provide a building for the Department of Art. The department could not be in on the early planning for the building; therefore, it has been necessary to adapt our needs to the proposed facilities allocated for art.

From the time the department was called in on the planning for the building, it was stressed that there would not be enough money to take care of the Department of Art's needs. All the exhibit space is to be located in the Architecture Building, and it is planned for the Department of Art to use one floor of the Architecture Building until that department grows into it. The Art Building is planned so two more floors can be added. It still has not been decided whether the Art Building will have two or three floors. If three floors are available in the Art Building, the department will still be short of space when it moves into the building. The earliest possible completion date for this building is late 1970.

## Research

Limited numbers of departments of art are involved in research. Because of present accomplishments, recognition, and personnel, this department is in a position to develop one of the outstanding art research programs in the nation. A summary of current research in the department follows this section of the report.

## Extra Educational Activities

Although the faculty has not been involved in extension classes this year, it has been involved in a number of extra educational activities. Extra educational activities of the faculty include:

- 1. Consultants for government agencies, foundations, and schools
- 2. Children's classes at the West Texas Museum
- 3. Adult classes at the Lubbock Garden and Art Center
- 4. Evening classes at South Plains Junior College
- 5. Workshops for elementary teachers and art teachers
- 6. Workshops for art groups
- 7. Numerous talks to local, state, and regional groups.

The Eighth National Art in Home Economics Conference was planned by the Department of Art and was held on the Tech campus this past spring. Some faculty members have played key roles in this group, and those faculty members carried the load in organizing and directing this conference. The National Art in Home Economics group is small, but twenty-four states and Canada were represented at the conference. Many reports from out of state conference participants were received expressing very positive impressions of the success of the Tech conference.

The Thirteenth Annual Child Art Conference was sponsored by the department in the fall of 1967. Over 200 teachers, administrators, and adults who work with children attended this one day conference. Conference participants came

from an area of a 150 mile radius of Lubbock. This conference was the pattern for state wide conferences sponsored by the Texas Art Education Association and the Texas Education Agency. This conference has been well received as meeting the needs of the area.

## Concluding Statement

The chairman of the Department of Art feels very strongly that students are important, and this is reflected throughout the department. Because of the nature of art, perhaps this is more important in this department than in others.

The faculty morale dropped out the bottom in the spring of 1967, when there was doubt of where art was going to be located and what was going to be considered art. This morale has improved greatly - actually there is a strong faculty morale at this time.

Much credit for the strong faculty morale should go to the Dean of the School of Arts and Sciences who came to Tech without knowing he would have a Department of Art. His ability to listen to the faculty, to help meet emergencies (of which there were many), and to help find the best ways of obtaining goals has helped the Department of Art over many difficult situations.

The Department of Art has a strong faculty, and the department has made great strides even with obstacles and unsolved problems. For this department to reach its full potential, the directions and goals must come from the faculty involved in the program.

The credit for the excellent beginning for the Department of Art should go to the faculty.

A Case Study of Experimental Art Programs in Two One-Room Pennsylvania Schools, 1951-1953.

Parental Understanding of School Art Programs and Its Relationship to Certain School Supervisory Practices in Art Education, 1952-1954.

Competencies, Skills and Knowledge Needed by Art Teachers, <u>Texas Trends in Art</u>, Journal of the Texas Art Educators Association, Spring, 1963.

Evaluation of Preparation for the Profession of Teaching Art, <u>Texas Trends in</u> Art, Journal of the Texas Art Educators Association, Spring, 1963.

A Survey of Lay Public Understanding of the School Art Program, Paper presented to Spring meeting of Texas Art Educators Association, March, 1964.

Examination of Creative Attributes of College Freshmen (in progress).

Current Production:

Sculpture

Rank: Assistant Professor Name: John James Mahlmann

Date of birth: January 21, 1942

### Degrees awarded by institution and date:

B.F.A. (Art Education)	Boston University	1962
M.F.A. (Art Education)	Boston University	1963
Ed.D. in progress at Penn	sylvania State University	

### Professional Experience:

Graduate Assistant Boston University 1962 - 1963

Graduate Assistant Pennsylvania State University 1963 - 1964

Instructor
Boston University
1964 - 1966

Instructor Penn State University 1966 - 1967

Assistant Professor
Department of Art
Texas Technological College
1967 - present

### Professional Organizations:

National Art Education Association, Phi Delta Kappa, American Craftsmen's Council, Eastern Arts, Texas Fine Arts Association, Texas Art Education Association, Pennsylvania State University Graduate Club, Lubbock Art Association.

### Research:

Research currently underway for Ed.D. degree at Penn State involves an experiment to determine the effect of various visual stimuli on the art products of college students.

### Current Production:

Collage

Rank: Professor

Name: Foster Leroy Marlow

Date of birth: November 10, 1925

Degrees awarded by institution and date:

	(Art)	Eastern Illinois University	1949
M. S.	(Art Education)	Eastern Illinois University	1960
D.Ed.	(Art Education)	Pennsylvania State University	1965

### Professional positions held:

Art Teacher (Grades 1 - 12) Lawrenceville, Illinois, Public Schools 1949 - 1950

Art Teacher (Grades 1 - 8) Robinson, Illinois, Public Schools 1950 - 1951

Art Teacher (Grades 1 - 6) Vandalia, Illinois, Public Schools 1956 - 1957

Interior Decorator and Store Manager Dallas, Texas 1959

Instructor Art and Art Education St. Cloud State College St. Cloud, Minnesota 1960 - 1963

Graduate Assistant Art Education and Research Pennsylvania State University 1963 - 1965

Professor Department of Art Texas Technological College 1965 - 1968

# Professional Organizations:

National Education Association, National Art Education Association, Eastern Arts Association, Minnesota Art Education Association, Illinois Art Education Association, Illinois Education Association, Penn State Graduate Club in Art Education (President)

# Current Production:

Textile design and Painting

Rank: Associate Professor

Name:

Roderick Parkinson

Date of birth:

Degrees awarded by institution and date:

Pratt I	Institute School	of Fine and Applied Arts	1940
B. S.	(Education)	Texas Technological College	1948
M.Ed.		Texas Technological College	1950

### Professional Experience:

Associate Professor
Department of Art
Texas Technological College
- present

### Professsional Organizations:

National Art Education Association, Texas State Art Teachers Association, South Plains Art Guild, Lubbock Art Association, West Texas Watercolor Association, Texas Fine Arts Association, Gargoyle Society, Aplha Delta Sigma Fraternity, Satchems.

#### Current Production:

Rank: Assistant Professor Name: Juanita Pollard

Date of birth: September 14, 1909

'Degrees awarded by institution and date:

B. A.	(English Education)	Abilene Christian College	1931
M. A.	(Painting)	Texas Women's University	1952

### Professional Experience:

Classroom Teacher Abilene Public Schools Abilene, Texas 1932 - 38

Head of Art Department Abilene Christian College Abilene, Texas 1938 - 1958

Illustrator North American Aviation Co. Grand Prairie, Texas 1943 - 1944

Head of Art Department Lubbock Christian College Lubbock, Texas 1959 - 1966

Assistant Professor Department of Art Texas Technological College 1966 - present

### Professional Organizations:

Inactive member of AAUW and ALTRUSA International, Texas Fine Arts Society, Associated Art Instructors of Texas, Texas Water Color Society, West Texas Museum, West Texas Water Color Society, Lubbock Art Association.

#### Research:

Acrylics (Plastic Water Colors) 1967.

## Current Production:

Rank: Associate Professor

Name: John W. Queen

Date of birth: September 28, 1929

Degrees awarded by institution and date:

B. S. (Art Education) M.F.A. (Sculpture) University of Houston University of Kansas 1956 1962

Professional positions held:

Instructor Spartan School of Aeronautics Tulsa, Oklahoma 1957

Teacher - Art
Alexander Hamilton Junior High School
Tulsa, Oklahoma
1957 - 1959

Associate Professor Department of Art Texas Technological College 1960 - present

Membership in professional societies:

Texas Fine Arts Association, Lubbock Art Association, Texas Home Economics Association, American Home Economics Association, National Casting Conference.

### Research:

Metal sculpture, continually involved in research dealing with the handling of the study of the durability of welded metal and cast concrete for out of door sculpture. (self financed)

#### Current Production:

Sculpture

Rank: Assistant Professor Name: Donna Rae Read

Date of birth: March 11, 1938

Degrees awarded by institution and date:

B. S. (Applied Arts) Iowa State University 1960 M. S. (Related Art and Crafts) University of Tennessee 1962

#### Professional Experience:

General Clerk (mosaics) Denver Ceramics Costa Mesa, California 1960 - 1961

Graduate Assistant University of Tennessee 1961 - 1962

Instructor University of Tennessee Craft Workshop Summers 1964 and 1965

Instructor
Judson College
Marion, Alabama
1962 - 1965

Assistant Professor Judson College Marion, Alabama 1965 - 1966

Assistant Professor Department of Art Texas Technological College 1966 - 1968

## Professional Organizations:

Art in Home Economics, A.C.C., A.H.E.A., A.A.U.P., T.A.C.T., Alabama Home Economics Association, A.A.U.W.

## Current Production:

Enameling and Textile Design

Rank: Associate Professor Name: Francis B. Stephen

Date of birth: March 7, 1916

Degrees awarded by institution and date:

B.F.A. (Sculpture) Oklahoma University 1951 M.F.A. (Sculpture) Oklahoma University 1952

### Professional Experience:

Illustrator National Research Bureau Burlinton, Iowa 1948 - 1949

Illustrator Stars & Stripes Army News Service Tunis, Tunisia 1943 - 1944

High School Art Teacher
Pharr San Juan Alamo Independent School District
Pharr, Texas
1952 - 1957

Associate Professor Phillips University Enid, Oklahoma 1957 - 1964

Assistant Professor North Texas State University Denton, Texas 1964 - 1967

Associate Professor Department of Art Texas Technological College 1967 - present

TOTAL CLASSES: 129 TOTAL CLASS Hours: 57

APPLIED ARTS CLASSES: 100 CLASS Hours: 410 ALLIED ARTS CLASSES: 29 CLASS Hours: 167 SINCE 1964, THE DEPARTMENT OF ART HAS BEEN ENGAGED IN DEVELOPING A FULL-FLEDGED RESEARCH PROGRAM DEALING WITH MANY FACETS OF THE VISUAL ARTS AND VISUAL ARTS EDUCATION. PRIOR TO THAT TIME, INDIVIDUALS IN THE DEPARTMENT HAD BEEN PRODUCTIVE IN RESEARCH IN THE ARTS; HOWEVER, THERE WAS NO CONCERTED DEPARTMENTAL EFFORT. IN 1965, A FACULTY MEMBER WAS DESIGNATED AS COORDINATOR OF RESEARCH ACTIVITIES IN ART, AND THIS HAS HELPED TO STIMULATE INTEREST IN RESEARCH AND SYNTHESIZE THE DIVERSE INTERESTS OF THE DEPARTMENT.

#### FUNDED PROJECTS

FUNDED PROJECTS HAVE BEEN SUPPORTED SOLELY THE STATE APPROPRIATED

RESEARCH MONEY WHICH HAS BEEN RATHER LIMITED. NEVERTHELESS, MUCH HAS BEEN

ACCOMPLISHED WITHIN THE LIMITATIONS OF THE FUNDS AVAILABLE.

FRANZ KRIWANEK'S PROJECT, "USES OF WEST TEXAS CLAYS AND COTTON ASHES
IN SMALL SCALE PRODUCTION AND EDUCATIONAL CERAMICS," WAS FUNDED DURING THE

1966-67 AND 1967-68 ACADEMIC YEARS. IT IS AN OUTSTANDING PIECE OF STUDIO
RESEARCH, WELL DESIGNED AND WELL EXECUTED. IT POINTS UP THE PRESSING NEED

THAT WE HAVE IN THE FIELD OF THE VISUAL ARTS FOR BODIES OF RESEARCH KNOWLEDGE

OF THIS TYPE. STUDIO ARTISTS HAVE ENGAGED IN RESEARCH IN THE RESPECTIVE

AREAS FOR MANY YEARS; HOWEVER, THEIR APPROACHES HAVE NOT USUALLY BEEN WELL

ORGANIZED AND SYSTEMATICALLY APPROACHED. THEY HAVE BEEN EVEN MORE NEGLIGENT

IN REPORTING THE RESULTS OF THEIR INVESTIGATIONS.

ONE OF THE BASIC WORKING ASSUMPTIONS WHICH HAS HAD AN INCREASING

INFLUENCE IN THE AREA OF VISUAL ARTS EDUCATION DURING THE PAST THREE DECADES

IS THE PROMOTION OF CREATIVE THINKING ABILITIES THROUGH ART ACTIVITIES. ART

EDUCATORS HAVE NOT HAD A LIMITED VIEW OF THIS IDEA, BUT HAVE CONTENDED THAT

GENERAL CREATIVITY IS PROMOTED AND REWARDED IN THE ART CLASSROOM, WITH

THINKING ABILITIES DEVELOPED BEING TRANSFERABLE TO OTHER AREAS OF ENDEAVOR.

IT HAS BEEN GENERALLY ASSUMED THAT THERE IS A STRONG RELATIONSHIP BETWEEN

GENERAL CREATIVITY AND CREATIVITY IN THE VISUAL ARTS. YET, THE ART EDUCATORS! -145-

POSITION HAS BEEN LARGELY BASED UPON PHILOSOPHICAL AND ANALYTICAL THINKING WITH A LACK OF RESEARCH EVIDENCE TO SUPPORT THIS POSITION. IT WAS WITHIN THIS FRAMEWORK OF THINKING THAT THE TECH STUDIES IN CREATIVITY AND ART EDUCATION WERE ESTABLISHED. THE BASIC PURPOSE OF THE INITIAL RESEARCH PROJECT WAS TO INVESTIGATE THE RELATIONSHIP OF GENERAL CREATIVE THINKING ABILITIES TO THREE VITAL AREAS OF ART EDUCATION - TEACHING METHODOLOGY, GRADING, AND SUCCESS IN COLLEGE. THE PROJECT WAS BEGUN IN 1965 AND WAS PLANNED IN THREE PHASES:

Phase I: Teaching Methodologies in Art: An Experiment in Depth and Breadth Approaches to Instruction: Donald Jack Davis, Principal Investigator.

THIS PROJECT WAS CONCERNED WITH THE EFFECTS OF TWO METHODS OF TEACHING ART — DEPTH AND BREADTH — UPON THE CREATIVE THINKING, ART ATTITUDES, ART INFORMATION, AND AESTHETIC QUALITY OF BEGINNING COLLEGE ART STUDENTS. A PRE-LIMINARY REPORT ON THIS PHASE OF THE PROJECT WAS COMPLETED IN AUGUST, 1966, AND A PAPER CONCERNING IT WAS PRESENTED AT THE NATIONAL ART EDUCATION

ASSOCIATION MEETING IN SAN FRANCISCO IN THE SPRING OF 1967. THE FINAL REPORT OF THE PROJECT WAS COMPLETED IN THE SUMMER OF 1968 AND IS IN THE PROCESS OF BEING REPRODUCED IN MONOGRAPH FORM BY THE TECH PRESS. AN ARTICLE CONCERNING THIS PROJECT HAS ALREADY BEEN ACCEPTED FOR PUBLICATION IN THE WINTER ISSUE OF STUDIES IN ART EDUCATION, THE RESEARCH JOURNAL OF THE NATIONAL ART EDUCATION ASSOCIATION.

PHASE II: INVESTIGATING EVALUATIVE CRITERIA FOR STUDIO ART COURSES:
AN EXPLORATORY STUDY: STANLEY S. MADEJA, PRINCIPAL
INVESTIGATOR.

DR. MADEJA, FORMERLY ASSOCIATE PROFESSOR OF ART AT TEXAS TECH AND NOW WITH THE U.S. OFFICE OF EDUCATION, GAVE A PRELIMINARY REPORT OF THIS PROJECT AT THE NATIONAL ART EDUCATION ASSOCIATION MEETING IN SAN FRANCISCO IN THE SPRING OF 1967. THE FINAL REPORT OF THE PROJECT WAS COMPLETED IN THE SUMMER OF 1968, AND IS IN THE PROCESS OF BEING REPRODUCED IN MONOGRAPH FORM BY TECH PRESS.

PHASE III: CREATIVITY, MOTIVATION, AND ACADEMIC SUCCESS: AN EXPLORATORY STUDY: DONALD JACK DAVIS AND STANLEY S. MADEJA, PRINCIPAL INVESTIGATORS.

THIS STUDY HAS BEEN A LONG RANGE ONE CONSIDERING THE CREATIVE THINKING ABILITIES, MOTIVATION, AND ACADEMIC SUCCESS OF 300 COLLEGE STUDENTS OVER THEIR FIRST TWO YEARS OF COLLEGE. THE FINAL DATA ANALYSIS IS IN PROGRESS AND THE FINAL REPORT OF THE PROJECT IS EXPECTED FOR COMPLETION IN THE FALL OF 1968.

IT WILL BE PRESENTED IN MONOGRAPH FORM.

ANOTHER FUNDED PROJECT WAS CARRIED ON DURING THE 1967-1968 ACADEMIC YEAR BY DR. FOSTER MARLOW AND DR. DONALD JACK DAVIS. THIS PROJECT WAS CARRIED WITH ELEMENTARY EDUCATION MAJORS AND WAS CONCERNED WITH THE USE OF VISUAL INSTRUMENTS FOR SELF-DIRECTED LEARNING. THE PROJECT, ENTITLED "THE USE OF VISUAL INSTRUMENTS FOR SELF-DIRECTED LEARNING" HAS BEEN COMPLETED, AND THE FINAL REPORT IS IN THE PROGESS OF BEING PREPARED. IT IS INTENDED THAT THE RESULTS OF THE PROJECT WILL BE DISSEMINATED THROUGH A PUBLISHED ARTICLE AND POSSIBLY THROUGH A MORE DETAILED MIMEOGRAPHED REPORT.

#### UNFUNDED RESEARCH

DR. BILL C. LOCKHART HAS BEEN ENGAGED DURING THE PAST YEAR IN A PROJECT AIMED AT IDENTIFYING CREATIVE CHARACTERISTICS OF SECONDARY SCHOOL STUDENTS.

THE PROJECT IS BEING CONDUCTED IN COOPERATION WITH THE ART DEPARTMENT OF THE SAN ANGELO, Texas public schools.

CONTINUING INTEREST AND WORK IN DETERMINING AND ANALYZING RESEARCH
TRENDS IN THE VISUAL ARTS HAS BEEN MAINTAINED BY DR. DONALD JACK DAVIS. A
PROGRESS REPORT OF HIS RESEARCH IN THIS AREA WAS PUBLISHED IN ART EDUCATION,
THE JOURNAL OF THE NATIONAL ART EDUCATION ASSOCIATION, IN OCTOBER, 1967. AT
THE PRESENT TIME, A BIBLIOGRAPHY OF SCIENTIFIC INVESTIGATIONS IN ART BETWEEN
1940 AND 1960 IS BEING MIMEOGRAPHED AND ASSEMBLED IN BOOKLET FORM. EFFORTS
HAVE ALREADY BEEN MADE TO CONTINUE THIS PROJECT BY EXAMINING AND ANALYZING
THE RESEARCH LITERATURE IN THE VISUAL ARTS SINCE 1960 AS WELL AS BEFORE 1940.

ONE DISSERTATION PROJECT WAS COMPLETED IN JUNE, 1968, BY DR. RICHARD
WAYNE HENTON. HIS PROJECT WAS ENTITLED, "AN EXPERIMENTAL STUDY COMPARING
MODULAR UNITS WITH CONVENTIONAL FURNISHINGS FOR TEACHING FURNITURE ARRANGEMENT"
AND WAS ACCEPTED BY THE GRADUATE SCHOOL OF THE UNIVERSITY OF MINNESOTA IN

RESEARCH ACTIVITIES IN THE DEPARTMENT OF ART - PAGE FOUR

PARTIAL FULFILLMENT OF THE REQUIREMENTS FOR THE PH.D. DEGREE.

Two other dissertation projects are underway by Mr. Ray W. Hellberg and Mr. John J. Mahlman. Both faculty members are pursuing the Ed.D. degree at The Pennsylvania State University. Expected completion date is June 1969.

IN ADDITION TO THE MORE ACADEMIC RESEARCH PROJECTS MENTIONED ABOVE, A NUMBER OF THE FACULTY ARE INVOLVED IN CREATIVE RESEARCH IN THEIR STUDIOS.

THE RESULTS OF MUCH OF THIS ENDEAVOR CAN BE NOTED IN THE NUMBER AND SCOPE OF ART EXHIBITIONS - LOCAL, STATE, REGIONAL, AND NATIONAL - IN WHICH THE ART FACULTY IS REPRESENTED.

# PART III

# FUTURE INFORMATION

## Objectives and Goals

Simply stated, the new Department of Art of Texas Technological College has an exciting and unlimited potential. The major goal is to develop the most outstanding department of art in the country. In view of the present enrollment and predicted future growth, it becomes vividly evident that tremendous opportunities exist in all areas of study in the visual arts at Texas Tech. The possibility of having one of the largest departments in the nation makes the challenge even stronger to achieve a very high degree of excellence. The majority of the art faculty is acutely aware of this challenge.

#### Major Strength - The Faculty

The major strength of the department is the superior quality of the art faculty; the present professional faculty has gained national attention in many areas and represents a team in depth and breadth that is found in few departments over the nation. The faculty has developed very strong programs in several areas under conditions that were far from ideal. A ten year projection of the number of faculty is attached.

#### New Structure - An Opportunity

The new department offers the structure to develop key programs at both the undergraduate and graduate level that will provide additional leadership for the state and nation. This leadership will not only come from the quality of teaching and from the graduates, but in all areas of the visual arts - production, research, writing and professional leadership.

#### Expanding Enrollment

A big problem facing the department is in regard to expanding enrollment. In the fall of 1962 there were 2495 semester hours (Applied Arts and Allied Arts) taught, and in the fall of 1967 there were 6524 semester hours taught. This represents an increase of 162 per cent over a five year period.

Extending that percentage would mean an increase of 10,569 semester hours in the fall of 1972 for a total of 17,093. Predicting this even further would mean a total of 44,784 semester hours by the fall of 1977. It is obvious that this growth is impossible. A report by the Coordinating Board has predicted large increases in art for all state institutions, and Tech's program has consistently grown at a faster rate than other art programs in Texas. The number of teaching positions, facilities, and university policies will in part determine enrollment growth. It seems very important to take a discerning look at predicted future growth. In fact, unless extra funds are available for teaching positions, the department will be forced to limit enrollment in the fall of 1968. There is a definite need to develop an orderly growth. A chart of the projected ten year enrollment is attached. Objectives

It becomes extremely difficult to determine and/or define long range goals and objectives for the Department of Art in view of the fact that there are immediate needs yet to be realized which are critical to the present operation of the department. With the creation of the Department of Art at Texas Tech, it was obvious that certain curricula and degree provisions would occur; however, the procurement of these provisions has apparently become difficult. Unless immediate goals are realized very soon, the successful development of the Department of Art will be severely jeopardized. At present, the art faculty and students are becoming extremely skeptical of our precarious situation. The idea of a student embarking upon an extensive course of study prefaced by "if we get the programs" is very demoralizing to the total department. In addition to curricula and degree provisions, the area of adequate budgeting and facilities also represents present critical needs.

## Immediate Objectives

The following are immediate objectives:

- 1. To obtain the Coordinating Board's approval of the Bachelor of Fine Arts and Master of Fine Arts degrees.
- 2. Dependent upon the approval of the Bachelor of Fine Arts degree, to phase out the Bachelor of Advertising Art and Design degree and the Applied Arts major. These two programs are responsible for much student confusion and are detrimental to the professional program planned.
- 3. To obtain adequate operating budget for the Department of Art. Inadequate maintenance, equipment, and travel funds are detrimental to the department's immediate goals. The two major areas that hurt the department most are needed slides for art history and money for model fees. The Department of Art's slide collection is practically nonexistent. It will take considerable support for a period of five to seven years to develop an adequate slide collection. A ten year projection of budget needs follows this section of the report.
- 4. To obtain adequate salaries to hold key faculty in the department.

  Many schools are attempting to hire some of our key faculty members in the areas of art education, interior design, studio and research by offering much higher salaries than Texas Tech has made available for these faculty members. Because of interest and loyalty to the department, these individuals have stayed at Texas Tech; however, the department cannot expect to hold key people if more competitive salaries are not given these people. To replace the key people would cost Texas Tech more than it would cost to reward the present personnel for their work.

#### Five to Ten Year Objectives

Objectives the Department of Art needs to achieve in the next five to ten years are listed below.

- 1. Recruitment of key people in the areas of art history and advertising art. There is a shortage of professional teachers in these fields, and these are two areas in which the department needs key faculty. Our lack of an art history slide collection will not help in recruiting. To attract a quality art historian, with excellent credentials, will probably take a higher salary than is presently being paid in the department.
- In the fall of 1968, the art faculty Reduction of teaching loads. will be carrying the heaviest clock hour load to date. Most of the studio faculty will be teaching 27 clock hours, and the art education and interior design faculty will be teaching 12 semester hours. The University of Texas' studio faculty teach 18 clock hours for 6 semester hours credit. Their art education instructors teach 18 clock hours for 9 semester hours credit. In order to have a first class art department, we need to encourage intensive art production, research, professional work, and leadership in the department. To reduce the teaching loads of key faculty, it would take an increase of 25 to 30 per cent in teaching positions to handle present enrollment. Many of the present faculty have gained national recognition in their respective fields, and to further promote this professional growth it is imperative that clock and semester hours be reduced in the future. This probably could not be accomplished at one time, but each year some faculty members' teaching loads could be reduced.

- 3. Obtain adequate building facilities. Two-thirds of the art faculty have never taught a class at Texas Tech in a laboratory that was designed for art instruction. Our department has gained the reputation of having one of the strongest faculties with the weakest facilities. The proposed building is a step in the right direction, but should all three floors that are proposed be completed, the building still will not meet the department's needs by the time it moves in. In addition to adequate laboratory space, exhibition space (we have none now), storage (our faculty exhibition is presently stored in a rest room) and office areas are critically needed. A listing of the projected space needs for the department follows this section of the report.
- 4. The development of a master's and a doctor's degree program in art education. The plans need to be developed immediately for these degrees with implementation coming as soon as possible.

  There is an increased demand for doctoral degree people in college teaching, and there is no place in Texas where such degrees can be earned as reported by the Coordinating Board in the report, "The Survey of Art, Music, and Drama in 1965."

  This report related that Texas Tech had over twice as many doctoral people in the Department of Art as any other school in the state. There is a definite need for the doctoral degree, and Texas Tech has the best faculty to develop the degree programs. The implementation of these programs can be instrumental in holding key faculty at Texas Tech.
- 5. Obtain the Master of Arts degree. This degree is needed to provide an academic and research oriented master's program.

- 6. To expand research: practical and theoretical aspects of the visual arts. In the past several years the art faculty has developed sound research. A major objective in the near future is to develop a broad base for research. In addition to the kinds of research being executed in the department, the whole area of creative research in the visual arts needs to be explored and refined. At present, the Department of Art has the faculty that can continue this development in the various research areas. A graduate program will definitely further stimulate and enhance research in the Department of Art.
- 7. To closely scrutinize the various possibilities regarding the final disposition of the Department of Art in regard to administrative structure. This objective is not based on an objection to the present structure, but it is based on a statement made in the spring of 1967 by the Academic Vice President that the Department of Art's location in the School of Arts and Sciences was an interim phase. This study and consideration of a future structure should involve the art faculty as well as others at a very early stage.
- 8. Development and establishment of field schools. The Taos Workshop,
  Taos, New Mexico, has operated very successfully for the past three
  summers. This program adds depth and prestige to our program. There
  is a critical need to establish permanent quarters for this operation
  in terms of studio laboratories and student housing. While the
  program has operated for six weeks the past two summers, a home for
  the workshop in Taos would enable the department to offer a full
  program for twelve weeks and could serve a special use for part of
  the proposed graduate program the other nine months.

The faculty has begun developing plans for a field school in

Dallas for advertising art majors. Six weeks of work between the junior and senior year will add much to the strength of the advertising art program. By operating in Dallas, the department could make use of top advertising art people and their facilities which are not available locally. Because many of our students are employed in Dallas, it would add to the importance of this program.

- 9. Accreditation by the National Association of Schools of Art. The National Association of Schools of Art is the only accrediting group for professional art programs. Only the University of Texas in this state is now accredited by N.A.S.A. Because of the professional orientation of the art programs at Texas Tech, it is important for these programs to be accredited. In order to gain accreditation, faculty loads must be reduced, a slide collection must be developed, and exhibit and gallery space must be made available.
- 10. Appointment of an art manager. The art manager would be a staff position responsible for (a) exhibitions, (b) procurring and maintaining permanent collections, (c) coordinator of continuing education, and (d) coordination of consultant and resource services to local, regional and state groups. This position is needed to help provide the services that are in keeping with the role of a university. This staff position would do much to free the faculty to continue their professional development.
- 11. Development of a contemporary art collection. Because of our isolation, it becomes important to develop a contemporary art collection as a teaching aid to be used campus wide. The department is very much concerned with being able to provide constant exhibitions all over the campus in offices, dormitories, classrooms, etc. New York University has been very successful with their "Living Art Collection." Such a collection would contribute to a cultural

- climate for the students and faculty of the university.
- 12. <u>Visiting artists</u>. It is important to bring outstanding artists to campus each semester. The visiting artist could alternate between a potter, a painter, a sculptor, etc. This way the department would have contact with many outstanding artists. Often these people could be encouraged to bring exhibits to the campus. The department's needs would be served better by visiting artists than by having a consulting professor.
- 13. Develop photography for the advertising art program. With increasing numbers of advertising artists being used in television, and with the development of the cinema as a fine arts medium, it becomes important to develop comprehensive programs in photographic processes as related to television, still photography, and motion picture technology.
- 14. Development of experimental program in appreciation. The Department of Art has a strong obligation to help develop understanding and insight of art in our culture for students other than art majors. Through the development of experimental courses, much could be done to help find better ways to contribute to the total development of all students.
- 15. Exhibits and competitions of national and international scope.

  Because of Lubbock's isolation, the students and art faculty, and college community are apt to be out of touch with art. Facilities and money are needed to put together extraordinary exhibitions.

  Selected competitions can do much to promote attention to our program and bring present day art to our campus.
- 16. Development of a print center. Print centers have been established on the West Coast and the East Coast, but none in the central part

of the United States. This would mean the addition of a master printer who could supervise and assist artists. This service would be available to artists of the area. The main strength would come through the invitation of an international artist, such as Miss Georgia O'Keeffe, who would develop the design and direct limited editions of a print. The department would keep one print and the rest would be for sale. A successful print center could attract international attention in a relatively short time.

- 17. Publication of books and portfolios of faculty work. Identity could be gained for the department by the publication of works of the faculty-artist. This would also be a valuable method of rewarding faculty who have made outstanding ahcievements in the visual arts.
- 18. Graduate student and faculty studios. Graduate students will need studio space where they will be able to spend many hours a day without interuption from scheduled classes. Certain individuals of the studio faculty need a place to work, and by having this work take place on campus, it would add to the atmosphere and serve as motivation for students. Two to three barracks would serve this purpose.
- 19. Further strengthening and upgrading the faculty. In the future, there will be little recruiting at the instructor level. With the development of graduate programs, more teaching will be done by teaching assistants. Stress will be placed on rewarding the faculty who do the most to contribute to the department.

# Concluding Statements

The Department of Art needs three things to achieve its major goals: time, money, and facilities. Time is needed to get new programs underway,

with additional time to evaluate the results. Adequate money is needed to operate the present program with more needed to achieve major goals. It is obvious that all the money needed cannot come from state funds. Outside sources will have to provide partial support for such needs as the Taos center, the contemporary art collection, and expanded research work. Facilities are needed to provide a highly professional faculty the opportunity to be most effective.

The goals and objectives have been developed with the dream of excellence in a broad based visual arts program. The faculty is energetic and eager, and they desire to pursue this dream. With adequate support, the sky is the limit!

DEPARTMENT OF BIOLOGY

MEDIUM AND LONG-RANGE PLANS

FOR

THE DEPARTMENT OF BIOLOGY

TEXAS TECHNOLOGICAL COLLEGE

· A Report to Dr. Grover E. Murray, President

by

The Faculty of the Department of Biology

September 1, 1968

#### History of the Department

The history of the Department of Biology, Texas Technological College, has been developed by the activities of a group of biological scientists dedicated to teaching and research.

Richard Arthur Studhalter, first head of the Department, served as head from 1925 until 1948. He was a member of the first faculty of Texas Technological College and was listed as a professor of biology in The Preliminary Announcement of the First Annual Catalogue, 1925-1926<sup>1</sup>. Three biology courses, Elementary Botany, Taxonomy of the Seed Plants, and Elementary Bacteriology, were described in the preliminary announcement. A course in zoology, though not described, was listed as a part of the curriculum for courses of study in agriculture.

Mrs. Richard A. (Ruth B.) Studhalter was an instructor in biology for the Fall term and was listed in <u>The Opening of a New Institution</u><sup>2</sup>. Four courses in Biology: General Botany, General Zoology, Physiology, and Vertebrate Anatomy were listed in the bulletin mentioned above.

The First Annual Catalogue number, 1925-1926, with Announcements for 1926-1927 described twenty courses in biology; 6 in botany, 3 in bacteriology and 11 in zoology. During this first year, biology was taught in the School of Liberal Arts. These courses were taught by Mr. and Mrs. Richard Arthur Studhalter. The biology laboratory consisted of a well-lighted, north room on the third floor of the Administration Building. This laboratory was equipped with water, electricity and gas.

Dr. Edward Looman Reed and Miss Bessie Beakley League joined the biology faculty for the 1926-1927 academic year. Dr. Reed was the first member of the

<sup>1</sup> Bulletin of Texas Technological College I:2, p. 5

<sup>2</sup> Bulletin of the Texas Technological College I:4, p. 8

<sup>3</sup> Bulletin of the Texas Technological College II:1, pp. 43-48

biology faculty who had earned the doctorate. The following students served as biology assistants during the 1926-1927 academic year: Anne Chipley, Claude Hope, Pauline Miller, J. Í. Kendrick, Jr., Ewell Hunt, and Charlie Read. Two of these assistants, Dr. Pauline Miller and Dr. Ewell Hunt are physicians in Lubbock at the present time. Milton Frederic Landwer and J. Welborn McKay joined the faculty in 1927, and Jesse Q. Sealey joined the faculty in 1928.

In 1929, the Department of Biology moved into the new Chemistry Building, sharing the second floor with the Department of Geology.

Dr. Studhalter was elected the first president of the Plains Museum, at the first meeting of the Society, March 27, 1929. Dr. Studhalter was a member of the first expedition to study the Yaqui Indians of Sonora, Mexico. During the early years of the College, Dr. and Mrs. Studhalter conducted summer field courses in biology in the mountains of New Mexico. Generally, these courses were taught in the Boy Scout Buildings in Gallinas Canyon near Las Vegas, New Mexico. One field course involved an expedition to the Pacific Northwest. Martha Cox, studying with Dr. Studhalter, was awarded the first Master's Degree in 1939. During his tenure as head of the Department, he carried a heavy class load and published an impressive number of scientific paper's.

When Dr. Studhalter resigned as head of the department in 1948, the biology faculty consisted on one professor, one associate professor, one assistant professor, and six instructors. Two members of the faculty had earned the doctorate. Several of the instructors had begun work within the Department toward the Master's Degree but had not completed the requirements for the degree.

In 1948, Dr. James Cecil Cross became the second head of the Department.

Graduate work in botany and zoology at the Master's level was emphasized. Seven

Master's degrees with majors in botany and 27 Master's degrees with majors in

zoology were awarded during the eleven years of Dr. Cross' tenure as departmental

head (Table 1). The faculties of the Department of Biology, Department of Geology and Department of Physics planned a new Science building which was completed in 1952. The Department of Biology occupied the second floor and part of the attic of this new facility. The amount of usable space occupied by the Department of Biology totaled 19,149 square feet (Figure 5). A great deal of controversy surrounded the planning, location, and construction of this building. Ruth Horn Andrews has described this building as "a squatty structure of anamolous design denominated the Science Building". The Legislature had placed a rider on the appropriations bill stating that no funds could be used for air-conditioning in the new building. Some faculty designated the elaborate stone trim as "gingerbread". The architects had insisted that the building keep the appearance of a low-roof design and planned only a few windows for the attic floor, particularly on the front of the building, stating that the attic would never be used for anything but storage. However, this attic floor without air-conditioning in this "squatty building of analomous design" has been converted, piece-meal, into airconditioned rooms housing most of the research laboratories of the Department of Biology.

When Dr. Cross retired as head of the Department in 1958, the faculty consisted of 4 professors, 2 associate professors, 4 assistant professors and 6 instructors.

Nine of the 15 full-time members of the faculty had earned the doctorate.

In 1959, the present chairman, Dr. Earl D. Camp, became the third head of the Department. The past 9 years have been characterized by a rapid increase in student enrollment, a gradual rise in student-teacher ratios, a continuous support of institutes and workshops, an increased emphasis upon graduate education and research, and a gradual development of additional space for teaching and research. The enrollment in semester hours has increased from 5,112 in the fall of 1959 or 10,429 for the entire year of 1959-1960 to 14,280 in the fall of 1967 or 28,356

<sup>4</sup> First Thirty Years: A History of Texas Technological College 1925-1955, p. 7.

for the entire year of 1967-1968 (Tables 3, and 6, Figure 1). Since 1960 the student-teacher ratio has been considerably above the ten year mean for the School of Arts and Sciences (Figure 4). This ratio increased from 19:1 in 1958 to a high of almost 33:1 in 1965; it dropped to 29:1 in 1967 (Figure 4).

The number of courses offered in the Department has increased from 4 listed in 1925 to 80 listed in  $1968^5$  (Table 10).

A Summer Institute for High School Biology Teachers has been supported by the National Science Foundation and by the faculty of the Department of Biology each year since 1959. Workshops for Medical Technicians have been supported several years.

The graduate faculty in biology has improved both in number and educational qualifications. In 1967 the faculty consisted of 20.5 members with the Ph.D. degree, one member with the Master's degree (as the highest degree) and 31 teaching assistants (Figure 3).

The Bachelor of Science in Medical Technology has been instituted at the undergraduate level. The Master of Science Degree with a major in microbiology and the doctorate with majors in biology, botany, microbiology, and zoology have been implemented at the graduate level. Support for a large number of Graduate Assistants has been provided. During the past 9 years, 22 students have earned the Master's degree with a major in botany, 49 students have earned the Master's degree with a major in zoology, and one student has earned the Master's degree with a major in microbiology (Table 1). Seventy-two of the 107 Master's Degrees earned in the Department of Biology have been earned in the past 9 years.

The expenditure for research in biology has increased. In 1967-1968 a total of \$195,600 was provided for research in biology. Of this amount \$27,410 was provided by the State Legislature, \$126,190 was provided by the Federal Government, and \$42,000 was provided by private sources (Table 8).

Bulletin of Texas Technological College XLIV:3, p. 79-85.

Additional space has been provided. In 1962, an addition to the Science Building increased this space to 24,756 square feet. Modification of the South Attic and, later, the North Attic increased this space to 36,043 square feet. The construction of the new Biology Facility, which will be completed in 1969, will increase this space to 89,000 square feet when all of the space is assigned to the Department of Biology (Figure 5).

Future development of teaching and research in biology appears to be quite promising.

#### GOALS OF THE DEPARTMENT

Past Goals

In the fall semester of 1958 the faculty of the Department of Biology was asked by The Administration to study the condition of the Department, to assess its role as a college department, and to establish goals for the future.

This study revealed that: (1) the faculty consisted of 9 members with the doctorate, four members with the Master's Degree, and one with the Bachelor's Degree; (2) the faculty was deficient in the areas of animal physiology, bacteriology, and plant pathology; (3) the instructional program suffered from a duplication of certain beginning courses, offered at the request of other departments, and from a limited variety of graduate courses; (4) faculty research was not adequately supported in terms of released time and apportionment of funds; (5) the graduate program was hindered by inadequate support for graduate students and instructional equipment.

The faculty decided that the Department should function within at least three roles; instruction, research, and public service. The instructional role had three aspects; teaching a general biology course for large numbers of students, teaching service courses for majors in other departments, and providing professional training for biology majors. Some controversy arose concerning the research role. The faculty agreed that research should be encouraged to the extent that it does not interfere with teaching duties. Public service involved a willingness to serve as consultants on biological problems, to participate in conferences and workshops, to speak before large groups, and to provide a reference collection of plants and animals for the benefit of local individuals.

The improvement of these roles seemed a worthwhile goal for the future.

Objectives to foster this improvement were discussed, and the following recommendations were made:

- 1. Consolidate the lecture sections in the freshman course to form larger lecture sections and recruit competent graduate students to teach laboratory sections. Require close coordination between lectures and laboratories. Such consolidation would provide faculty time to develop more courses at the upper class levels.
- 2. Offer a one-semester general bacteriology course for all students electing a course in bacteriology and provide an advanced bacteriology course the second semester for biology majors.
- 3. Combine the five semesters of courses in human anatomy and physiology into a challenging, one-semester course.
  - 4. Institute a problems course for senior students.
- 5. Evaluate the courses offered as a part of the teacher training program at the undergraduate level. A seminar type course should be investigated.
- 6. Initiate a graduate program at the Master's level in bacteriology, immediately. Declared majors in bacteriology at the freshman level comprised over one-half of the freshman declaring majors in biology.
- 7. Support research by reducing the teaching loads to a maximum of 10-12 contact hours a week, by budgeting a certain amount of departmental funds for research to cover cost of publications by faculty members, travel to scientific meetings, and purchase of certain types of equipment, by recognizing research that leads to publication, and by encouraging faculty to obtain grants from federal, state, and private agencies.
- 8. Support graduate study by making available teaching assistantships that are competitive financially with those of the best universities, by taking steps toward initiating a Ph.D. program as soon as commitment of funds for the support of a graduate faculty and graduate facilities is made by the administration, by recruiting the best qualified faculty possible, by replacing part-time instructors who do not plan to study for advanced degrees, and by recruiting graduate students to teach laboratories.

- Improve the present curriculum by developing new courses essential to a biology program.
- 10. Improve the status of the faculty by recruiting only those individuals with the Ph.D. degree who have proven ability or professional promise in both teaching and research and by awarding promotion and tenure only to those individuals showing an increasing professional merit in teaching and research.

At the suggestion of President Goodwin in 1961, the faculty of Texas

Technological College made an institutional self-study as a part of the report to

the Southern Association of Colleges and Universities. The committee on the

purpose of the Institution in a communication to the faculty dated November 1, 1961,

stated,

"Supported in its belief by past developments, current trends, geographical considerations, and a philosophy of higher education, the Committee on Purpose believes that Texas Technological College can best serve the future by striving to be a multipurpose state university of the first class—the center of learning in West Texas—which provides opportunity for a liberal education and professional training at the undergraduate and graduate levels."

This report was approved by the faculty of the College. At this time the faculty of the Department of Biology was faced by an increasing influx of students whose basic need was undergraduate education requiring the services of a large faculty. At the same time the faculty was faced by a smaller but increasing group of students pursuing graduate work and research, requiring the services of an imaginative, experienced, graduate faculty. The accommodation of both groups seemed impossible in relation to the limited resources provided.

However, the faculty of the Department decided that if it fulfilled its goal of improving its role in the three areas mentioned earlier, teaching, research, and Public service, in supporting the purpose of the College, both of these groups of students should be accommodated.

In faculty meetings, and in two faculty conferences, one held in September, 1963, at the Silver Spruce Lodge in Red River, New Mexico, and the other held in September, 1964, in the St. Bernard Hotel and Chalets, Taos Ski Valley, Taos, New Mexico, the faculty made plans for the effective accommodation of both of these groups of students. Some of the objectives outlined and decisions made are listed below:

- 1. Request an increased number of classified personnel to provide efficient office help and stock room management. This objective also involved the outlining of procedures for ordering supplies and equipment.
- 2. Evaluate present space allotments to determine what spaces could be modified and reallocated to best serve the functions of the Department.
- 3. Study the present curriculum to prevent overlap at the undergraduate level and to allow expansion at the graduate level. Some effort at this study had been made, but more effort was needed.
- 4. Develop a program at the Master's level in microbiology and at the doctorate level in biology, botany, microbiology and zoology.
- 5. Improve the graduate faculty both in quantity and in quality. To accomplish this objective, individuals must be recruited who are capable and willing to teach at the undergraduate level while developing graduate courses and independent research programs leading to publications in the individual scientist's area of interest. Areas for recruitment listed by the faculty over the past nine years include animal physiology, bacteriology, plant physiology, cytology, cytogenetics, population genetics, virology, protozoology, industrial microbiology, ethology, ornithology, parasitology, electron microscopy, ecology, biometry, and radiation biology.

The order listed did not necessarily indicate the order of recruitment in the different fields. The quality of the person recruited seemed more important.

- 6. Plan laboratory facilities and office space to accommodate the increasing number of graduate faculty to be recruited.
- 7. Support field research and instruction by providing and maintaining field vehicles for the transportation of faculty and students and by developing the Kermit Field Station.
- 8. Apply for private, state and federal funds to support teaching and research. Due to the imaginative efforts of an industrious faculty and the understanding of an encouraging administration most of these objectives have been accomplished but to varying degrees.

The increase in the number of degrees earned in biology is indicated in Table 1.

The rapid increase in student enrollments in biology is indicated in Tables 3 and 4, and Figure 1.

This enrollment has been accommodated to a large extent by the increase in student-teacher ratio for the Department of Biology as diagramed in Figure 4.

The cost of instruction (faculty salaries) per semester hour is tabulated in Table 5 and has not increased appreciably over the past years, the cost of instruction at all levels never approaching the formula recommendation for undergraduate instruction. During the same periods, programs at the master's and doctoral level have been implemented, and the number of graduate students has increased as reported in Table 7.

The operational cost of the Department per semester hour is recorded in Table 6, and has not increased appreciably during the past years. The cost for all levels of instruction in biology has been less than 50% of the recommended formula for undergraduate instruction in the sciences.

The additional funds that would have been available to instructional salaries of the Department if budget allocations could have followed formula recommendations is recorded in Figure 2.

The increase in the undergraduate and graduate majors may be observed in Table 7.

The improvement in quantity and quality of the graduate faculty and the increase in support of teaching assistants is evident in Figure 3. The full time faculty is recorded in Table 2, followed by the publication record of the faculty.

The success in acquiring space for programs in biology is reflected in Figure 5.

The increase in support for research by state, local, and private agencies is recorded in Table 8.

A large portion of the Departmental budget for maintenance, equipment, and travel has been spent on operation and maintenance of the Department and a much smaller portion has been spent to purchase capital equipment as indicated in Table 9. Continual evaluation of expenditures are required as the level of instructional courses change. The increase in the number of graduate courses offered is recorded in Table 10.

The Department of Biology has made remarkable progress in achieving its goal over the past ten years, but even more progress must be accomplished in the future. Projections of student enrollment during the next five years are given in Table 11. The basis for continual assessment of requirements for faculty, space, and facilities is determined in part from these projections.

Five Year Goals

On February 14, 1966, The Coordinating Board, Texas College and University

System recommended with certain exceptions that "all doctorate programs within the

Texas College and University System shall be limited to:

The University of Texas

Texas A & M University

Texas Technological College

The University of Houston".

Dr. Grover E. Murray, President of Texas Technological College, has indicated that Texas Technological College shall become a center for study of problems associated with arid and semi-arid lands and has implemented this plan by the creation of ICASALS. The faculty has supported this idea. Much of the research of the biology faculty is related to the plants and animals of arid and semi-arid lands and to playas within these areas.

During the past few years The Coordinating Board, Texas College and University

System has encouraged the opening of additional junior colleges in Texas, particularly in or near metropolitan areas. The opening of these junior colleges has reduced the rate of growth of freshman and sophomore enrollments at Texas Technological College and in this Department. On the other hand, the rate of increase of enrollments at the upper class level and graduate level has increased in the Department of Biology. The rate of increase will be accelerated in the future.

In light of the three developments described above, the faculty of the Department of Biology has reevaluated the present position of the Department and the objectives necessary to maintain its goal of improving its role in the teaching, research and public service areas of the college.

The faculty of the Department realizes that a strong graduate program in biology is essential to the role of Texas Technological College in a university

system, that many of the problems of arid lands are biological in nature, and that the shift in levels of instruction from the freshman level to the upper undergraduate level and graduate instruction may become quite expensive in regard to funds and faculty time.

An evaluation of the present conditions of the Department, indicates that tremendous progress has been made in teaching, research, and public service during the past ten years.

1. Faculty members have been recruited in 10 of the 16 areas listed as necessary by the faculty. Areas of recruitment during the next five years should include eight faculty members recruited in the following areas; developmental biology, radiation biology, microbial physiology, ethology, population ecology, cell physiology, vertebrate physiology, and virology.

The recruitment of faculty in these areas will fill all of the space originally planned for the Department of Biology in the new Biology Building. During the next five years the space presently designated as general space and certain other space must be altered to accommodate the anticipated growth of the faculty in both number and quality.

Salary support for the additional faculty may be justified by the enrollment increase at the upper undergraduate level and at the graduate level and by a reduction of the student-teacher ratio in biology (Table 11). However, increasingly the research activities of the faculty should receive support from funds other than teaching salaries.

2. The undergraduate curriculum in biology is strong at the present time. The capable students who have majored in biology have been quite successful in Graduate School and other professional schools. However, the curriculum should receive constant study by the faculty to determine what changes should be made to insure that the information the student receives is current and accurate, that the communication and relationship between the faculty and the student are the best

that can be provided, utilizing the present resources, that students are stimulated in the learning progress, and that the implementation of the curriculum provides time for faculty research and development. This study will emphasize the following areas:

- a. The two freshman courses, general botany and general zoology, should be studied to see if they should continue to be taught as separate courses, or if they should be integrated into a general biology course. Principles to be emphasized and methods of presentation should be reviewed.
- b. The core curricula of the three major fields in the Department should be reviewed to determine what modifications should be made.
- c. The upper level undergraduate courses should be studied to determine if a reorganization of present courses and the addition of new courses should be made.

These curriculum studies may be made by the present faculty, or, if help is needed, the service of off-campus consulting agencies may be requested.

- 3. The graduate areas of study must receive constant review as new faculty members are added and as the number of masters and doctoral candidates increases.
- 4. The research activity of the faculty and students must be supported, strengthened and increased. The areas of research to be emphasized will depend to a large extent upon the faculty that can be recruited and retained. Within the next five years a great deal of flexibility will exist in research areas. The new biology building has been planned with this flexibility in mind. This flexibility of the faculty could necessitate the acquisition of additional field study areas.

Several members of the faculty of the Department of Biology, competent in teaching and research, have been attracted by and have moved to other institutions such as the University of Michigan, the University of Missouri, the University of Texas Southwestern Medical School, the Bishop Museum, and the National Cotton Council of America. Because emphasis has been placed upon individual research

rather than upon team research, when each scientist moved he took the entire program with him. Efforts to fill these vacancies with scientists whose interests are in the same general area of study have led to the recruitment of capable scientists, but the research interests of the new scientists have differed from those of the original ones. This variance is not, necessarily, regrettable. some cases it may be desirable. A desirable result of recruitment should be the addition of faculty with imagination and industry who are able and willing to conduct research which leads to publication and who will attract capable students to study with them. When a scientist consistently publishes the results of his work he develops a reputation which may be regional, national, or world-wide. the reputation is good, hopefully, he will attract students to study with him who may develop into capable teachers and research scientists. The increase in number of scientists of this caliber and the increase in number of capable graduate students attracted will foster the reputation of the Department and extend this reputation regionally, nationally and world-wide. The eminence that this Department will enjoy in the future will depend upon the number of such scientists attracted, retained, and supported. Current areas of research that will receive additional emphasis in the future may be envisioned by a study of the bibliography which accompanies this report.

Ten Year Goals

If resources become available to support the continued growth and development of the Department and if the faculty remains imaginative, energetic, and productive, within the next ten years the faculty should have designed and should have been assured funds for a research building probably built as an addition to the new facility to be occupied in 1969. The design of this research addition will be developed as requirements of future experimental equipment change and as emphasis in new and existing areas of study change. The possible role of non-teaching research scientists should be explored.

## Support for Goals

The support for the accomplishment of the goal discussed must be provided.

Most of the increased support must come from the Legislature. The request for the 1969-71 biennium includes a request for a three-fold increase in funds for departmental operation. This increase is mandatory in view of the facts, that past budgets have been totally inadequate for the purchase of necessary capital equipment, that the occupation of the new facility will require funds to maintain everything from typewriters to an electron microscope, that some of the present equipment will become obsolete, and that the amount requested is relevant to the formula yield proposed by two groups charged with a study of higher education in Texas, The Texas Commission on Higher Education and The Coordinating Board, Texas College and University System. Budget support for teaching salaries and for departmental operation in biology has been approximately 50 per cent of the recommended formula yield. The lack of such budget support may produce a crisis within the Department. Certainly, this lack of adequate support has been the cause of some unrest among the present faculty in the Department.

Neither the Department nor the College can attain a place of eminence among the universities of the nation without adequate funding. Unfortunately, the provisions of increased funds will not assure excellence. A resourceful, creative, and industrious faculty must utilize these funds. Without adequate support, the faculty of the Department of Biology believes that excellence in the areas of teaching, research, and public service will be more difficult to attain and maintain.
