IN presenting this illustrated folder, we wish to call your attention to the world-wide reputation of the Star Wind Engine, which is illustrated on the front of this circular.

Commencing in a small way sixteen years ago, with limited capital, the manufacturers, from the satisfactory assurance received from the purchasers of their goods, were satisfied that there was a growing demand for a first-class Mill, and commenced manufacturing what was known as the Hall Mill, and continued to do so until 1876, at which time they

brought out the Mill so well-known as the Star Mill, which was a result of their experience. The Star Mill was popular from the start, and at this time is sold and shipped to every state and territory from the Atlantic to the Pacific, and from the lakes to the gulf.

Every detail in the construction of the Star Mill was carefully investigated; strength, durability, simplicity, and perfect governing principle only being considered, well knowing that if perfection in these were obtained, and with honest dealing, the Star Mill would be able to fight its way to the front. That success has crowned our efforts, we have but to state that we have two acres of floor room used in the manufacture of the Star Mill, and supply the largest cattle companies in the country with the Mills. Branch houses have been established at Kansas City, Mo., for the more rapid distribution of our goods in the growing west and north-

west, and the pacific slope, and at Ft. Worth, Texas, for our southern and Mexico trade, and in New York for foreign buyers. We also found that while the Star Mill was winning its way and carrying with it the blessing of rest to the tired husbandman, and administering to the comforts of the beasts of the field, that it was necessary that pure water be first obtained. We then associated with us the present manager of our Kansas City House, who, by his experience and invention, brought out what is known as the Marcy Tubular Well Tools and Valves, and anyone who cares to investigate will be convinced that he has fully succeeded in overcoming the faults and objections so commonly raised by people who have been disappointed in wells of the Tubular class, by sending for and reading our Tubular Well catalogue. We can now offer our customers first-class tools to get an ample

supply of water, a Star Mill to do away with the laborious work of pumping by hand, together with our new and improved pumps, consisting of force, lift and regulating styles, and a complete line of brass and malleable fittings and well pipe. We also manufacture a full line of water tanks from 5 to 1500 barrels in capacity, and are prepared to fill orders promptly, as we have the largest and most complete Wind Mill works in the world.

It is proper that we recognize the numerous letters received from our many customers conveying to us their appreciation of the goods sold them, and we not only thank them for the liberal patronage extended to us in the past, but will assure them that the same careful attention will be given them at any time. Catalogues containing a full description of our goods will be mailed on application.
