

*Dr. Vinograd. a few years have passed (while completing this long study) since talking with you! Hope this suffices for my lengthy silence!*

# THE DICHOTOMY OF REALITY VERSES OBSERVATION

*R. Vogelmay*

To use Albert Einsteins remark: "Observation is relative to the observers position", we Perceive opposites contingent to his relativity equations; i.e., his Aleph Points. The space verses time equations depict such ultimate variable throughout mass-time, mans unique Place apparently within both space and time, likely somePlace nearer a Point with concomitant 'slow' time-- such opinion viewed from how infinitesimal he is within the vastness of the cosmos.

When comparing Einsteins two basic space-time equations:  $L' = L\sqrt{1 - \frac{v^2}{c^2}}$  &  $T = \frac{T_0}{\sqrt{1 - \frac{v^2}{c^2}}}$

we can see that complementarity might exist as dictated by the nuclear Physicist CPT theorem (charge, Parity and time) and as derived from these opposite relative continuum; i.e., ALL space sans time (eternal NOW) verses a Point (within space) with infinite time. The enigma of 'relative energy' (energetic state) as one traverses the space-time universe between these two Aleph Primordial areas would thence be Perceived (at least within the baryon world of matter) as a gradient, likely degrees Kelvin as one example. Subjective 'time rates' thus for man would be ProPortionate to his temperature (K°) Place in the universe, such not too all unlikely as witnessed in hallucinogenic research!

Since the 'acceleration' of subjective thought Processes in creative insight indicates mans ability to 'jump time'-- even if only momentarily, such inspirational inputs, generally of visual nature, do indeed contain much data of Prudent import. It is this relative realm of subjective experience, although sought, is fleeting for the average Person, indeed, according to academia, associated with the mental defective. It is here that the dual innate mental structures in man come to an argument of dominance; deductive verses inductive, intellect (IQ) verses the élan vital (CQ).

Now that ample empirical human split-brain data disclose Precisely the dichotomous space verses time oriented Primitive brains in man, we Perceive much anxiety in behalf of the more solipsistic schools of behaviorism who have little use or application for unconscious structure. Indeed, as S. Freud likely Perceived when he said: "The unconscious\* wills to remain UNconscious" may be civilized(?) mans current Problem; i.e., we are apparently unable to know that self which dominates us! Fortunately man has also another unconscious, timeless and thus unable to utilize our forms of verbal (digitized) communication, but non-the-less endeavors to awaken our conscious mind to the dichotomies that exist within. This Gestalten faculty expresses itself both as the creative genius (said flash of insight) or visual hallucinations- which are frowned upon by the other claimed 'rational' self which wills to remain incognito.

In short, whether arguing over which a-priori, like quantum verses wave mechanics, came first or is more relevant, one must examine 'which' faculty as dictating mans momentary opinion, dominates? As Einstein said, it is 'relative', be it yin-yang or sympathetic-Parasympathetic CNS and how each views its mass-time existence. Since these Primitive brains in man vie constantly for mans conscious attention, each has its own asset and need for mass-time awareness, the Problem only comes when ignorance Prevails in both consciousness AND the Past-tense only awareness of one of the two unconscious faculty. This latter time oriented faculty has objectives over and above what might constitute benign altruism and empathy and therein can be seen the basic dilemma of mankind at this date in his evolutionary time table.

*\* left cerebral hemisphere!*

# MYTHOLOGICAL, PSYCHOLOGICAL, NEUROPHYSIOLOGICAL AND PHYSICAL DICHOTOMIES

First Principle(dynamic)	Second Principle(static)	Left Primitive Brain	Right Primitive Brain
Initself, Idea	Foritself, Shadow	Right cerebral hemisphere	Left cerebral hemisphere
Élan vital(CQ)	Intellect (IQ)	Dopamine (neurotransmitter)	Serotonin (5HT)
Yang, space oriented	Yin, time oriented	Parasympathetic CNS half	Sympathetic CNS half
Pans, constructive	Sans, destructive	DNA, X chromosome	RNA, Y chromosome
Eros, love, sex	Psyche, hate	Sigma EEG (REM dream)	Delta EEG(somnambulism)
Mahetoba, anama	Jogubi, anamus	Negative Polarity going	Positive going (EEG's)
Daemon (Secrates)	Demon, devil	Superconsciousness	Subconsciousness
Future tense (Janus)	Past tense (LT memory)	Archetype, libido	Thanatos, id (S/R)
E(space) derived (NOW)	Point (time) derived	Inductive, Gestalten	Deductive, digital
Sakti, High Self	Kali, Low Self	Creative insight	Sequential recall
Bei-sich-sebst-seyn	Das Man, Falleness	Vowels, 'on-going' <i>note CVC's!</i>	Stops, (start-stops)
Super Ego, spirit	Alter Ego, soul	Sounds, harmony, holistic	Consonants, tempo
Heaven, (motion)	Hell, (frozen)	Giving, sharing	Machievellianistic
Right Reason	Rational Reason (natural)	Overt, sincere	Covert, diabolical
EpiPrometheus (light)	Prometheus (vampire)	Quick, alert, carefree	Timid, shy, withdrawn
Theseus	Minotaur (Bull)	Relaxed, cheerful	Suspicious, sensitive
Paramatman, Khuda	Jiva Atman, Khudi	Practical, realistic	Submissive or domineers
I Am, God, Brahman, Esau	Self (thyself), Jacob	Self-assured, sociable	Frustratable, tense
Satori, Nirvana	Freakout (LSD)	Enthusiastic, easy going	Impatient, depressive
Aphrodite or Venus	Ares or Mars	Passive (evolutional)	Aggressive, materialist
Prajna, Ishvara	Vignana	Concrete, synthetic	Abstracts, reductionist
Seraph, Isis, Ishtar	Snake, Osiris, Set	Pre-verbal (visual)	Verbal (acoustical)
Pollux, Orpheus	Caster, Eurydice	Conceptual, authentic	Perceptual, inauthentic
Christ Self (Unity)	Judas	Convergent, non-reflective	Divergent, reflective
Oneness, Sacrosanct, ALL	Individuality, separateness	Concupiscent	Irascible
Akwalu, Mana Lea, Logoi	Akwalupu, Thoth, Tihuti	Cholinergic, acetylcholinergic	Adrenergic, Muscarinic,
Kahuna, Brahma, Krishna	Samsara		Nicotinic
Mitsein, Oversoul	Dasein, Beelzebub	Acidic (mimitic)	Alkalotic (mimitic)
Absolute Tao, Shavian	Mammon,	(needs free hydrogen:neg.pol.)	(needs oxygen:pos.pol.)
Balder	Loki	Spontaneous(impulsive)	Repetitious(compulsive)

The likely name for consciousness is Hoder, Probably the midbrain (mesencephalon) for 'integrating' the two dichotomous unconscious complementals within mass-time. In Transactional Analysis the 'Adult' would appear to be the conscious mind, -the middle Party of the Trimutri (hindu) or Trinity in Christianity. Thus it would appear that the primary objective is the ultimate union or integration of these two basic complements of either space or time derivation; for subsequent existence elsewhere, likely beyond our baryon continuum.

# THE DERIVATION OF CONSCIOUSNESS

In keeping with the dictates of the CPT theorem of nuclear physics, the duality principle prevails for ALL 'mass-time' ENTITIES. As these opposite constituents are derived of energy (light), such are also implying opposite relative continuum; i.e., light with space sans time and its opposite non-energy continuum with time sans space.

The Einsteinian equations depicting relative space-time continuum disclose the progressive dichotomy between conceivable energy-non-energy primordial continuum:

$$L' = L \sqrt{1 - \frac{v^2}{c^2}}$$

$$T = \frac{T_0}{\sqrt{1 - \frac{v^2}{c^2}}}$$

L' = New length

L = Original length

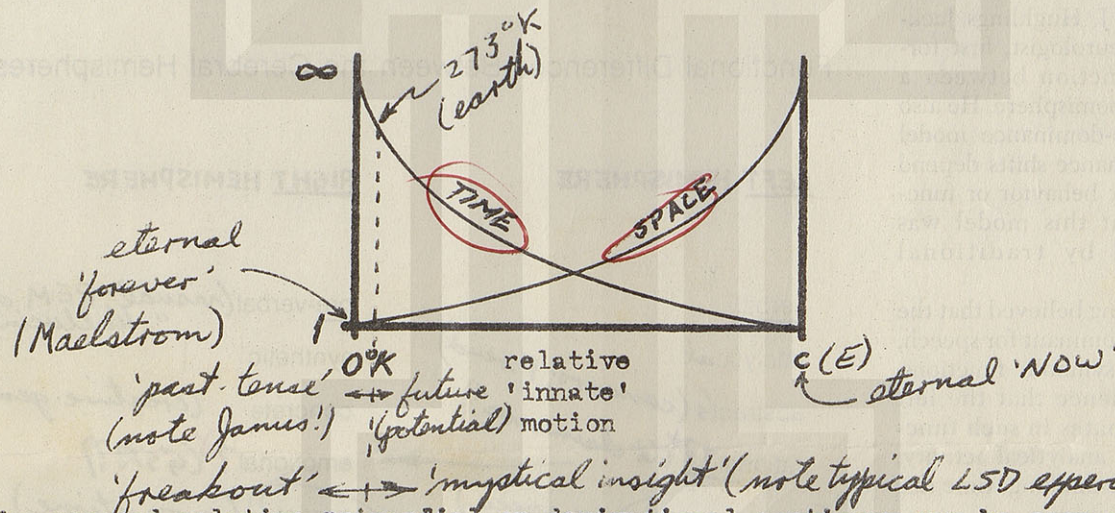

T = True time

T<sub>0</sub> = Observed time

v = Relative Velocity

c = Velocity of Light

The graphic expression of these equations:

The opposed relative primordial or derivational continuum can be seen as either 'SPACE' or 'TIME' oriented, such is the bilateral cerebral hemispheric dichotomy seen in split-brain human subjects. (see page 67, April Psychology Today.) (over)

Not only do enigmas of schizophrenia become comprehensible, but creative genius of conceptual originality derived from 'accelerated' time. The profound implications of these findings may integrate many academic disciplines as well as permit final comprehension of universal objectives.

Roger Vogelsang

right-movers are assumed to have more-dominant left hemispheres. It is further assumed that different functions are mediated by each of the hemispheres.

In addition, each hemisphere mediates certain perceptual, cognitive and emotional styles. Thus, the personality of a left-mover (dominant right hemisphere) is more likely to reflect the style of right-hemisphere functioning; the personality of a right-mover is more likely to reflect the style of left-hemisphere functioning.

**Two.** Though this model refers to cerebral dominance, it goes beyond the traditional use of this term, which implies a single dominant hemisphere. Evidence from neurology and neurophysiology suggests that a double-dominance model may more accurately reflect the nature of the hemispheric organization of the cerebral cortex.

In the double-dominance concept, each hemisphere plays a dominant role for different functions: the left hemisphere is dominant for certain functions and the right hemisphere is dominant for other functions. Almost a hundred years ago J. Hughlings Jackson, the English neurologist, first formulated the distinction between a major and a minor hemisphere. He also proposed a double-dominance model in which the dominance shifts depend upon the particular behavior or function involved. But this model was largely ignored by traditional neurology.

Scientists have long believed that the left hemisphere is dominant for speech, writing, and other symbolic functions. There is also evidence that the left hemisphere dominates in such functions as arithmetic, analytical activity, logical and abstract thinking, time discrimination and euphoria.

**Jobs.** Until recently, the right hemisphere was regarded as the minor or nondominant one. However, there is rapidly accumulating evidence that the right hemisphere is dominant for such nonverbal functions as spatial perception, body-image functions, imagery, recognition of melodies, recognition of faces, and for such perceptual-motor constructional functions as drawing and block design. There are also data that support association of the right hemisphere with creativity, depression and certain language functions.

**Key.** Recent evidence also suggests that the two hemispheres function at

different levels of arousal. The left hemisphere seems to function at a higher level of arousal than the right. Perhaps the two hemispheres are differentially connected with the subcortical parts of the brain associated with arousal. This would explain why EEG alpha waves associated with a relaxed, low-arousal state are found in greater quantity over the right hemisphere.

Altered states of consciousness—dreaming, hypnosis, psychedelic intoxication, anesthesia, daydreaming, meditation—are also associated with relaxation or low arousal. Could they be associated to a greater extent with the functioning of the right hemisphere? Interestingly, these states are usually characterized by the absence of logical verbalization, a characteristic of left-hemisphere functioning. The whole problem of states of consciousness and their alteration may thus be understood in terms of the particular interaction of the two hemispheres.

Joseph Bogen, a Los Angeles neurologist, who with Roger Sperry studied patients whose right and left cere-

bral hemispheres had been separated in surgery, sought words to describe the different modes of functioning of the two hemispheres. He distinguishes between a *propositional* mind, represented by the left hemisphere, and an *appositional* mind, represented by the right hemisphere. The propositional hemisphere is verbal, rational, digital and objective. The appositional mind is non verbal, emotional, analogical and subjective. I believe that the terms that describe left-hemisphere functions are, on the whole, more applicable to the right-mover, while those that describe right-hemisphere functions are more applicable to the left-mover.

**Yin & Yang.** In view of the apparent duality of brain function, it is no coincidence that thinkers about the nature of man and his mental processes have so often been led to a dualistic conception—the Yin and Yang of oriental philosophy, the primary and secondary process of Freud, and the first- and second-signal system of Pavlov. Other dichotomies include the diffuse and syncretic thinking of Heinz Werner, (Continued on page 96.)

### Functional Differences Between the Cerebral Hemispheres

#### THE 'SELF'

A caution is in order for those who claim to 'seek', yet but for ego drive reasons wish to know more than their peers. Thus the requirement for those who wish to 'know the self', such endeavor must be in absolute sincerity, without faltering and deep concern not only for others but ones own self since a traumatic period is likely to ensue the discovery of unconscious structures. As Freud so well recognized (and also thusly disdained); "the unconscious wills to REMAIN UNconscious", and Psyche will do ALL in her power to not only remain incognito, but worse, 'censor' from consciousness the profound insights as derived from the other complemental unconscious which uses 'eidetic' forms of communication; i.e., REM dream and hallucinations.

To embark upon a lengthy cross academic treatise would be foolish, but to integrate what Einstein perceived in his Aleph derivational points of either space or time, and such correlative dichotomies witnessed between mans two cerebral hemispheres is but to point to the tip of a vast and most profound 'ice-berg'. Since the Behavioral schools of psychology adroitly avoid these imports, we begin to note that also do the many clergy or churches who claim to seek, yet avoid the now obvious human split-brain imports disclosing mans dual oppositely derived and oriented unconscious. In short, for a definite reason man appears unable to look within, such reasons now fully understood and the basic reason why the above warning about the absolute sincere desire to know, despite the likely anxieties and fears which will well-up into conscious awareness as comprehension ensues. The 'death-wish' is VERY real and often comes to those of higher intellect which reflects the strength of Psyche within! It is seen in the overt way in people who have taken LSD which allows for insights into Psyche's complexes and fixations of which we are all harboring and must be purged (catharsis) before complete perception is allowed within. Psyche is like a dirty window and keeps spreading more dirt on the window as we begin to try to peer through, indeed much trauma can ensue, certainly psychologically and possibly physiologically-- thus the warning! Psyche will become our own personal Thanatos, but so long as we conscious minds really have the reins for mental directiveness, we can override her legerdemain behavior and KNOW.

To examine the facts, briefly we shall indicate what Einstein perceived, thence integrating same to the said split-brain imports, we will recognize the two dichotomous unconscious which reside as our primitive brains in the pons area of our brainstem. Each sends up EEG(electroencephalogram) data since are electrogenetics for unconscious thought, the deductive (past-tense knowing) static Psyche is long-term memory (sans what she 'censors out!') while Eros her counterpart sends up visual information, whether of the past or FUTURE! Psyche, maybe better known as 'Foritself', lives to 'obtain', resides in the right lateral body side but uses the left cerebral hemisphere. Eros of course the other lateral side(s). Psyche gives 'recall' data upon the positive going EEG; while we are either aware of the 'external world' or visual inner world during the negative going EEG half cycle. Thus we see a dual unconscious mental matrix vying for conscious awareness, we the conscious mind residing in the midbrain, usually only aware of the outside world and past-tense recall known as intellect.

Since it is 'intellect'(Bergsonian nomenclature) that dominates most of us, we can see why science places yet so much esteem on the aggressive predatory left cerebral hemisphere--little comprehending what, if anything, that may be going on in the other half of our brains! Only by and through what Einstein perceived can we fully appreciate how these two oppositely derived unconscious behave, the time derived Psyche perceives as a motion-picture camera, and stores data in such 'stills' within time, her sequential awareness fine for our memory. Her complement however perceives in a steady state beyond our relative time rates, indeed, perceives not only our past but potential future with all contingent mass-time data at hand. To 'classify', name or digitize is Psyche's art, aside from circumlocution and devious ways of keeping we conscious minds ignorant. Since she has the option to name things in her kind of quantifying language, we see her calling herself 'Dexter'(right hand) while her benign counterpart 'Sinister' and other various names which permit us to perceive her real insidiousness! Even her esteem in IQ(intellect) rather than CQ(creative quotient) indicates why our kind of society only claims the 'new', yet peddles the old,, true creative genius almost gone where rote forms of educational 'conditioning' prevails.

## 2(The 'SELF')

One of the better examples of the mental complex can be seen in Janus, the Roman God which perceives the past from its right side and the future by its left. Only recently has the human split-brain research confirmed this enigma, only such correlation remaining an enigma in scientific pedantic eyes. Instead of elation over the mounting data disclosing mans real psychopathic genesis, we perceive much anxiety in the information, to say nothing of the adroit avoidance in same, disclosing the likelihood of some form of Armageddon before Gotterdammerung! Since the evidence well confirms the prognosis of Carl Jung and H. Bergson, we can see why so much disdain has been held for these researchers by our solipsistic Behavioral schools of psychology. Much of the religious dogma and ancient myth are very accurate, but alas our 'censor', to keep us naive!, continues to neurotically block imports which we really should see.

To touch on the neurotransmitters, such discloses why the tense intellect use tobacco for the nicotine therein. Since nicotine is the precursor to serotonin (5HT) which is the sympathetic CNS half neurotransmitter (communicative 'link'), we can perceive why tobacco is 'legal' despite its vastly traumatic effect on the body! Yet, THC(the active ingredient in marihuana) which supresses 5HT is maintained as illegal, indeed with vastly punitive laws against its use, and despite its obvious therapeutic value!<sup>1</sup> Now that the 'pot which classifies the kettle'<sup>2</sup> is becoming known, one wonders how long we will remain with our Pink-Cadillac and 'men-on-the-moon' syndromes along with our many psycho-neuro-pathies which the right cerebral hemisphere dominant Hopi Indians suffers so little! Man is about to 'know the self' and find to his chagrin that he has been duped very badly and to his own demise!

Now that we perceive, at least in part, from where our troubles come as well as the diabolical 'censoring' to sustain our naiveté, we can begin to suggest 'remedies' so that we may not only unfold into wisdom (intuitive knowledge) but force Psyche into her continued evolution and integration with her counterpart; i.e., 'marriage' of Psyche and Eros! Since we mass-time conscious minds are charged with this responsibility, it behooves us to at least examine the facts as they exist:

1. Human split-brain imports disclose the two mental complements; either of space or time orientation.<sup>3</sup>
2. That an 'irascible automaton'<sup>4</sup> prevails BESIDES consciousness.<sup>5</sup>
3. That a 'static' vs. 'dynamic' independent mental structure exists in man and of bilateral dominance.<sup>6</sup>
4. That the schizophrenic perceives more (and profoundly so!) than his good doctor!<sup>7</sup>
5. That our hallucinogen using younger generations perceive the profound more than those who own power and authority over them!<sup>8</sup>
6. That we are 'censored'<sup>9</sup> in proportion to intellect<sup>10</sup> and the female\* has right hemisphere dominance with males left hemisphere with predatory behavior.<sup>8,11</sup>
7. That there are many means and modes of gaining higher consciousness<sup>11</sup>; be it by sustaining alpha EEG's in the left cerebral hemisphere to allow the Gestalten to get into conscious awareness or outright 'helicopter rides' via the hallucinogens.
8. That mans euphoria comes with his 'good-value' CNS (parasympathetic) system, whether by sexual orgasm<sup>12</sup> or 'high' rapport with the I Am of spiritual nature.
9. That the furious 'war' existing 'within'<sup>13</sup> will only be consummated by the volitional act and will of the conscious mind, such struggle well worth the attempt!
10. That the Maelstrom (freakout) is but the challenge of Psyche in her ultimate death-throe to avoid being subjugated to either consciousness or her benign counterpart.<sup>14</sup>
11. Generally, but not in all cases, those who exhibit an unilateral smile on their left facial side will indicate interest and ability to learn about spiritual things, the right cerebral hemisphere in these cases reflects its happiness in life. Those who smile only from their right lateral facial side will often reflect the covert (if not overt)<sup>15</sup> greed and predatory behavior, at least as far as social life is concerned.
12. The Trinity of independent mental faculty in man<sup>16</sup> is not only witnessed in the profound split-brain findings but in myth<sup>17</sup> and persistent schizophrenic art.<sup>7</sup>

\*outside possibly of 'women-libers'

## THE PSYCHOPATHY OF ADVANCED CIVILIZATIONS

Fact I. Low MAO(monocamine oxidase) = high 5HT(serotonin)

Fact II.High 5HT = symPathetic CNS dominance

Fact III.SymPathetic CNS (as unconscious structure) = right primitive brain or left cerebral hemisphere<sup>1</sup>

Therefore:

The right lateral Primitive brain (or left cerebral hemisphere) is the PsychoPathic faculty in man:

Since low MAO subjects are overt sociopaths<sup>2</sup>

Question: why should the conscious mind of man continue to believe in biases derived from his own left cerebral hemisphere? (i.e., claimed values etc.<sup>3,4</sup>) As S. Freud so will perceived when he said "The unconscious wills to remain UNconscious.", such 'censoring' by that one unconscious faculty to Permit full and complete control over a naive conscious mind.(mid-brain)

The erux of the PsychoPathy stems from the need of this symPathetic faculty to exercise not only control for Predatory reasons, but worse, so block conscious awareness into the Profound realms of yet another unconscious faculty, better known as the Parasympathetic, in neurological jargon, but the I Am in religious dogma. In short, empirical evidence now concludes that man has not only been the goat of a supreme hoax, but is about to commit a vast and horrendous folly of nuclear holocaust-- unaware of the real, and unconscious reason!

To indicate the 'death-wish' of this left cerebral hemisphere as it turns into Thanatos upon being discovered, many LSD users, especially of of high intellectual Prowess(thus left hemisphere dominants), experience this Phenomenon, indeed, many do commit suicide. This same reason will evoke Armageddon, but because the left hemisphere now perceives Gotterdammerung coming as mankind begins to know his 'self'. In short therefore, the myth of Psyche verses Eros is adroit since Psyche will go to her 'marriage' only over her dead body. Further, in the myth where Loki tries to kill Balder, Hoder, likely the conscious mind, is being used in this endeavor. In Hindu myth, Jogubi (left hemisphere) continues to evolve until such time where its complement Mahotoba descends to take Jogubi up to a 'union' of some import!

It is this writers opinion that the current stage of evolution for this time oriented 'evolving' faculty,(to be discerned clearly before it is too late) should be examined Post-haste in view of the now ample empirical evidence. Not only in the above subtle neurotransmitter correlations, but human split-brain and bilateral proclivities between the differently behaving Primitive brains in man.

The legislated lunacy which has, at all cost, strived to suppress adjuncts which may well be the greatest Psychotherapeutic adjuncts known to man;i.e., THC, while maintaining legal nicotine, an adjunct which does exactly the opposite by enhancing the diabolical Predatory faculty, such 'civilized' behavior may indeed be the greatest travesty Perpetrated upon man-- and due to his own stupidity.

1.Prof. P. Bakan, 'The Eyes Have It', Psychology Today, April '71

2.'The Biochemical High Risk Paradigm---', SCIENCE, Oct. 15,'77

3.Dr. Herrons,'Right Handed Sayings',Psychology Today, March '76

4.Dr. E.H. Kats;see 'The Other Hemisphere', SCIENCE NEWS, April 3,'76

The vast dark cloud of ignorance on unconscious structures are slowly being understood, and in place, a great anxiety. The dominance of mans left cerebral hemisphere (right Primitive brain) has for centuries 'censored' (Freud) man, especially from the Profound within his own skull! Since the conscious mind of man was to moderate these dichotomous space verses time derived (thus oriented) bilateral faculty, the Predatory faculty gained dominance to the demise of the loving Gestalten (non-time) left Primitive brain, (being complemental dictates opposite behavior and/or objectivity!) As dominance is the whole objective of this innately Predatory faculty, one can Perceive why volitional ignorance Prevails amongst the Powerfull, authoritative and 'credentialed'-- independent of innate wisdom. This ignorance abounds in the very 'authoritative' Psychology 'experts'-- who have no use for unconscious structure-- despite the now ample human split-brain empirical facts!

No doubt the greatest travesty Perpetrated upon mankind will be witnessed soon as dissemination of the now obvious becomes apparent. Since man would swing his allegiance to his more benign unconscious self, if but he 'knew', one can understand the final stand that its less-than-benign complement must take to Preclude same in order to maintain its dominance! Where mans eyes are Persistantly focussed on the 'Past' (note Janus!), he cannot help but remain 'censored'-- be they in church or in Politics, the 'Promise' evokes more following than sincere wisdom derived in visual form from a truly 'knowing' entity within. Ritual replaces creative genius now, we repetitiously do the same 'dull round' (Blake) in all endeavors except in devising new forms of armaments. Not only does the legislated status-quoism dictate nonevolutional Prowess in many who truly 'seek' via adjuncts, but such ensure continued dominance of the Predatory 'self' who wills not to evolve further.

So long as mans 'Messiah' (greenback or heavenly) remains Outside of his-self, one can Perceive the vast deceit Promulgated upon mankind. Only by chaotic Periods of change can man also grow-- maybe the dictum of idle-mind is the devils work-shop, but complacency breeds decadence, and worse, licensed Predation in democratic cultures where the majority rule the minority! Licensed Predation also occurs through authorized established organizations, the church, for one, Promulgating dogma instead of facts to maintain fear in their congregations-- and thus their own survival. The Political Promise of 'safety' again Permits the Orwellian specter on naive Peoples, soon the only freedom to remain is the Propaganda of the state or 'authorized' officialdom. (today the Behaviorists who deny the unconscious!)

To fully Perceive the hectic world-wide armament buildup, one needs to comprehend the real reason within man himself. As man comes close to 'knowing the self', the obvious recourse of mans dominating Predatory self is suicide, since to be dominated by both the conscious mind and a benign other faculty would surely mean submission and a return to evolutionary objectives. The inevitable trauma for mankind can be seen now by the most naive, only the truly wise now seek cultural avoidance, at least until the worst is over.
